REGIONAL ENVIRONMENTAL CENTER

About the REC

The Regional Environmental Center for Central and Eastern Europe (REC) is a non-partisan, non-advocacy, not-for-profit international organisation with a mission to assist in solving environmental problems in Central and Eastern Europe (CEE). The center fulfils this mission by promoting cooperation among non-governmental organisations, governments, businesses and other environmental stakeholders, and by supporting the free exchange of information and public participation in environmental decision making.

The REC was established in 1990 by the United States, the European Commission and Hungary. Today, the REC is legally based on a charter signed by the governments of 28 countries and the European Commission, and on an international agreement with the government of Hungary. The REC has its head office in Szentendre, Hungary, and country offices and field offices in 17 beneficiary countries, which are: Albania, Bosnia and Herzegovina, Bulgaria, Croatia, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, the former Yugoslav Republic of Macedonia, Montenegro, Poland, Romania, Serbia, Slovakia, Slovenia and Turkey.

Recent donors are the European Commission and the governments of Austria, Belgium, Bosnia and Herzegovina, Bulgaria, the Czech Republic, Croatia, Denmark, Estonia, Finland, Germany, Hungary, Italy, Japan, Latvia, Lithuania, the Netherlands, Norway, Poland, Slovakia, Slovenia, Sweden, Switzerland, the United Kingdom, and the United States, as well as other inter-governmental and private institutions.

Acknowledgements

The development and preparation of such a publication and its content represents a major effort by a broad range of people, especially considering that the endeavour was centred around making the directory as well as a wider survey and assessment of the environmental civil society movement in the Western Balkans. In addition, the whole process was compressed into a challenging six-month period. As such, the many people involved in the survey and the publication's development should be acknowledged for all of their hard work, especially those who showed their commitment despite illness or personal loss.

Thanks should go first and foremost to the project's sponsor, the Swedish International Development Co-operation Agency (Sida) and its supportive staff, namely Helen Holm and Magdalena Svensson, who enabled and encouraged the REC to include this publication as part of a larger project of support for South Eastern European (SEE) environmental civil society organisations (the SECTOR programme).

Thanks should also go to the hundreds of environmental groups who filled in the survey questionnaire and/or took part in the personal interviews. It is for them that the directory and survey were largely developed and we hope it serves its purpose. A broad range of over 100 other stakeholders from government, CSO support organisations, experts and donors also took part in the interviews; we thank them all.

The following people were instrumental in the design and execution of the overall survey: The core group of REC staff who developed the survey methodology, designed the ques-

tionnaires, carried out in-country interviews, analysed data and wrote up the various country findings comprised the following people: Adriana Craciun, Dana Carmen Romanescu, Jerome Simpson, Stephen Stec, Robert Atkinson, Richard Filcak, Orsolya Szalasi, Kaidi Tingas and Magdolna Toth-Nagy. Szilvia Pandi Szegedi collected and processed data into electronic format and made it possible to analyse the wealth of information from the questionnaires. Erzsebet Aszalos, Entela Pinguli and Todd Schenk gave additional support and Laszlo Leitold was very helpful with the financial administration of the project. Special thanks goes to David Currie with his help on the Indexes and Professor JoAnn Carmin from the Massachusetts Institute of Technology gave some valuable advice on the questionnaire.

The coordination of the directory and survey at the country level was handled by the REC's country and field offices. Without them the survey could not have been completed so swiftly, and the following people should be credited for their contribution:

REC Country Office Albania

Mihallaq Qirjo, Alken Myftiu and Genta Hoxta

REC Country Office Bosnia and Herzegovina

Nesad Seremet, Inka Sehovic and Jasmina Islambegovic

REC Country Office Croatia

Irena Brnada, Dalia Matijevic and Bojan Sliskovic

REC Country Office former Yugoslav Republic of Macedonia

Katarina Stojkovska, Valentina Petrusevska and Stole Georgiev

REC Country Office Montenegro

Srna Sudar Vilotic and Mira Puric

REC Country Office Serbia

Milan Dacic, Uros Miloradovic and
Aleksandra Mladenovic

REC Field Office Kosovo

Zeqir Veselaj, Pravena Firza and Merita
Fazliu Mehmed

For the directory publication, the following people were instrumental in its production: Layout and design were performed by Patricia Barna and Robert Adam, supported by Sylvia Magyar. The text was copy-edited by David Landry and Steven Graning and proofread by Michael Lindsay and Greg Spencer. Emese Gal supported the process of the publication's production.

How to use this directory

The NGO Directory is structured into three main parts. There are six chapters for each of the REC's beneficiary countries listed alphabetically: Albania, Bosnia and Herzegovina, Croatia, former Yugoslav Republic of Macedonia, Montenegro, Serbia and Kosovo (territory under interim UN administration).

Each chapter contains a map of the country and an overview of the country's CSO sector based on the statistical data gathered through the 2006 edition questionnaire. For each country, the CSOs are listed in alphabetical order by town of origin. When several CSOs are from the same town of origin, the listing is made by name in alphabetical order.

Each CSO entry gives the following information profile:

- Original name of the organisation, the English version and the most commonly used abbreviated name;
- Contact information including: address, telephone, fax, e-mail and internet URL;
- Responsible person — the person who legally represents the NGO;
- Contact person — to be contacted with respect to any enquiries related to the organisation;
- Year of foundation, and when the organisation began operating;
- Number of members affiliated with the organisation;
- Number of staff who work for the organisation full-time or part-time (paid staff), and number of members and volunteers (unpaid staff);
- Current annual budget is presented using budget ranges;

- Sources of funding for the organisation are presented using seven codes from F1 to F13; consult the code bar on the cover for each code's explanation;
- Topic areas in which the organisation is active are presented using codes from T1 to T26. For the complete list of these codes, refer to the code bar on the cover;
- Activities implemented on a regular basis by the organisation are listed using codes from A1 to A25. For the complete list of these codes, refer to the code bar on the cover;
- Level of activity, or where the organisation is active. There are four different levels: local or community based, regionally within the country, nationally and internationally. An organisation may operate at more than one level;
- Membership in umbrella organisation networks in which the organisation takes an active role;
- Languages spoken or written by the organisation's members;
- Main publications of the organisation;

Only fields where information was provided appear in the NGO's profile.

Additionally, in order to help users identify an NGO quickly, two indexes have been included listing all of the organisations:

- By country and by NGO name (English version) in alphabetical order;
- By main topic and by country in alphabetical order.

Introduction

This publication represents the fifth time that a regional directory of environmental NGOs in the former Socialist countries has been researched and published. The first edition was prepared in 1992 by Alexander Juras at the Institute for European Environmental Policy in Bonn, and subsequent editions were prepared by REC staff in 1994, 1997 and 2001. This directory is different in some ways to the previous editions in that it only covers seven territories — those of the Western Balkans — rather than the entire Central and East European region. This narrowed scope is mainly due to the availability of funding to carry out such region-wide work. However, the remaining countries will be updated through a cooperative effort of the REC and the Massachusetts Institute of Technology.

Additionally, this directory is different in that it includes not only the traditional organisations' entries but also the main findings of an assessment of the status of the environmental civil society organisations (ECSOs) in the region. In the 1997 edition, the REC included the results of an extensive NGO needs analysis, which was well received. In this version, the country data is compared to that of the previous directory (2001), followed by the main findings and summaries of the assessment survey's results. The full version of the assessment report can be found on the REC's website.

The assessment and the directory are products of a larger programme of support being carried out by the REC. This programme, Supporting Environmental Civil Society Organisations in South Eastern

Europe (SECTOR), runs from 2006 to 2010, and is funded by the Swedish International Development Cooperation Agency (Sida). Although the programme comprises different forms of support, such as project support grants, organisational assessments, networking assistance and targeted capacity-building training, the enhancement of civil society's role in the urban environment and sustainability are the key aims.

The assessment survey has three practical outcomes. Firstly, it enables environmental organisations to be included into the updated directory of environmental organisations on the national and regional (SEE) levels. Secondly, the survey maps the current status of environmental civil society organisations and their operating environment, and provides in-depth analysis of the challenges and opportunities they face. Thirdly, the survey helps the REC in its preparation and planning of other forms of support through the SECTOR programme.

As with previous editions, this directory is designed to be a tool for all those working with or within SEE environmental groups. The directory, in its print and on-line versions, is a free resource that can be used by all stakeholders. The benefits of such a directory are clear in networking terms alone and, as was stated in 2001, its absence would be conspicuous (the directory is by far the most searched database on the REC's website). National NGO directories do exist, but they tend to focus on all civil groups and not just the environmental ones. The REC also sees enhanced value in preparing comparable information across the region, which may in some way serve

as a catalyst to regional civil society cooperation and encourage further support for the valuable work of these organisations.

Entries list the organisations' names in both the national languages and in English, along with their contact data, main activities and priorities to give the reader a quick and clear view of their work. We have enhanced the lists of activities and priority topics of work from the previous version, as it became clear that the fields that the groups cover have broadened in recent years. In addition there have been some slight changes to the budget and staffing categories.

When we added the budget and staffing categories in 2001 we explained that the purpose was to attempt to measure the employment values and structure of the environmental groups and to estimate the economic volume (value) of the sector. Now in 2006 we can start to see how the movement is developing in these areas, something which the above-mentioned civil society assessment takes further and to greater depth.

We do not claim to cover all of the environmental civil groups working in the Western Balkans, but we are confident that the entries represent a substantial number of those that are active in these countries. It is inevitable that in such a large task, and carried out in a short span of time, that some groups may have been omitted or contain errors in their entries. We apologise for any such oversights. These groups can, however, send their details to the REC using the form in this volume, or online at the REC's website <www.rec.org> where they will be added to the continuously updated version. This will help to ensure that the electronic version of the directory is as up-to-date and accurate as possible.

Survey methodology

The directory and assessment survey was done in three stages:

1. collection of data from open sources;

2. distribution of a questionnaire to a wide audience of environmental civil society organisations (used for the directory entries); and
3. semi-structured personal interviews (additional for the assessment).

Therefore quantitative and qualitative data were collected in the course of the survey.

The research focus was organised around two main themes and five modules. The two themes were status, situation and state of the development of the environmental civil society organisations (internal environment) and the legal, economic, social and environmental conditions in the particular countries influencing the organisations (external operating environment). The survey was organised around the following five modules:

- legal and regulatory framework;
- resource base;
- human and organisational capacities;
- information and knowledge base; and
- accountability.

A questionnaire was developed and widely distributed by the REC's country and field offices to ECSOs (since the survey is targeted at groups, rather than at specific individuals) between June and July 2006. The questionnaire was divided into two parts. Part A was used for the organisations' entry into the directory. Part B of the questionnaire was designed for a deeper assessment of the groups, but is confidential and not used within each organisation's entry. The data entered there were aggregated and used for the analytical part of the REC's survey assessing the status and needs of the environmental movement in SEE (see page 21 to view Part A of the questionnaire and the Annex to see Part B).

An electronic questionnaire was distributed through the web as a downloadable version, as well as through e-mail lists, REC offices and personal communication. The REC prepared versions in local languages in

FIGURE 1

Environmental Civil Society Organisations' Budgets and Workforce in 2006

Country	Number of ECSOs surveyed	Number of members	Number of volunteers involved	Number of full-/part-time staff	Estimated total budget (EUR)
Albania	68	11,420	29,296	253	837,250
Bosnia and Herzegovina	88	54,628	5,507	222	1,761,000
Croatia	70	16,739	6,174	69	1,616,750
Former Yugoslav Republic of Macedonia	50	7,466	3,010	62	713,750
Montenegro	14	3,211	634	50	477,500
Serbia	114	35,434	19,922	198	1,648,000
Kosovo	30	2,878	2,601	105	382,500
Total	434	131,776	67,144	959	7,436,750

all seven involved countries/territories. ECSOs were invited to take part in the survey by filling out and submitting the questionnaire. Collected questionnaires were translated and uploaded into the English-language database, which contains altogether 434 questionnaires.

In the last stage of the field research (July – August 2006) the REC survey team conducted face-to-face, semi-structured interviews with ECSO leaders, legal experts, donors, government representatives and other stakeholders. Data from the questionnaire and personal interviews were compared with data from open sources and the whole civil society assessment survey was drafted. The main findings are given in this directory, but the full text and recommendations are covered in a separate report.

Regional snapshot overview

The REC conducted its previous survey of ECSOs in South Eastern Europe in 2001. In that survey the REC received back some 467 questionnaires, compared to 434 received this time. This event would suggest that the number of organisations is

more or less stable; there are newcomers but also organisations which ceased to operate since the last survey.

We asked the organisations to indicate the number of full-time and part-time staff, numbers of members and of volunteers. The aim was to determine the size of the sector as employer, but also to evaluate how many people are involved in activities and actions organised by the groups. Since practically the same categories were used in the 2001 survey, we may compare development and trends in the sector.

In the past five years, there has been an increase in the number of people working at ECSOs as paid employees — from 326 in 2001 to 959 in 2006. However, the number of members reported fell markedly from 403,837 to 131,776, whereas the number of volunteers increased from a mere 2,840 in 2001 to 67,144 in 2006. See Figure 1.

These numbers suggest a further professionalisation of ECSOs, which are involving more people as full-time or part-time employees and engaging more people as active volunteers. The decrease in the number of members may suggest that the organ-

isations are generally more careful (realistic) in defining who is a member of their organisation, or could indicate that the popularity of environmental action is on the wane. Increasing the number of volunteers working for and active with the groups suggests that the organisations are gradually improving at involving people qualitatively into their actions.

In an attempt to gauge the financial magnitude and economic value of the organisations, the REC asked about the size of the annual budget. To view the origin of their resources we also asked ECSOs to reveal the sources of their funding. ECSOs had the opportunity to click one of nine budget categories, from “no budget” to “budget over EUR 100,000.” The information gathered shows (when using median ranges) that the estimated total annual budget for the sector is EUR 7,436,750 (comparing favourably with EUR 3,400,250 in 2001). The biggest total budget is in Bosnia and Herzegovina (EUR 1,761,000), followed closely by Serbia (EUR 1,648,000), while the smallest is in Kosovo (territory under interim UN administration) (EUR 382,500). In all countries in the sample we see an increase in estimated total budgets compared to five years ago, but the degree of increase varies.

However, if we look by country at the percentage of ECSOs in the lowest budget categories — no budget or less than EUR 500 — compared to the same categories from 2001 an interesting picture appears (see Figure 2).

In most of the countries the percentage of groups that are in the lowest budget categories has increased (except for the former Yugoslav Republic of Macedonia and Serbia, where it remains similar). So despite an increase in overall total budgets clearly an increasing number of groups have very limited or no financial resources. Figure 3 contains a similar comparison for the budget category of “more than EUR 100,000.”

These comparisons suggest that over the past five years there has been a measurable concentration of financial sources into bigger organisations, coupled with an increasing number of organisations with no or minimal budgets. We might conclude that a situation of haves and have-nots is developing in the environmental movement in the West Balkans, which could have implications for both the activity and diversity of the sector. One should keep in mind, however, that estimates suggest the average ECSO budget has increased in all territories, with the exception of Kosovo (territory under interim UN administration).

A review of sources of funds for ECSOs across the region shows that a prevailing number of them are dependant on foreign/international foundation donations or grants and on domestic foundations or grants. Membership dues were marked as a common source of funding in Albania, Bosnia and Herzegovina, Croatia and the former Yugoslav Republic of Macedonia. Meanwhile, domestic government/public sector grants or donations gained importance in Bosnia and Herzegovina, Croatia, the former Yugoslav Republic of Macedonia, Montenegro and Serbia. It is interesting that the category of domestic business/corporate sponsorship donations and grants was marked as one of the most common sources only in the case of Croatia. This perhaps indicates an important link between general economic and social development in a given country and the ability or willingness of corporations and the private sector to contribute to non-profit activities, but it might also signify the need for Croatian groups to broaden their funding base with the withdrawal of many foreign aid programmes.

If we move away from funding and look at what the groups are doing regionally, any differences between 2001 and 2006 are less evident. The top five priority topics are:

1. environmental education/education for sustainable development;

2. nature protection;
3. sustainable development;
4. waste issues;
5. tourism and sustainable/eco-tourism, followed closely by water issues.

This result is very similar to the 2001 topics, when nature protection, environmental education, public participation, biodiversity and tourism had the highest scores.

However, the introduction of more “brown

issues” in the top five, such as waste, is perhaps an indicator of changing priorities. The full list is shown in Figure 4.

Besides this, we also evaluated how the work in the topic areas is carried out, or what the most popular activities they perform are in pursuit of their goals. The top three ranked were:

1. awareness-raising campaigns;
2. education;
3. information dissemination.

FIGURE 2

Percentage of ECSOs in the two lowest budget categories:

Country	2006	2001
Albania	51	42
Bosnia and Herzegovina	24	18
Croatia	35	21
Former Yugoslav Republic of Macedonia	18	21
Montenegro	14	N/A
Serbia	28	29
Kosovo	44	8

FIGURE 3

Percentage of ECSOs in the highest budget categories:

Country	2006	2001
Albania	3	0
Bosnia and Herzegovina	9	1
Croatia	10	3
Former Yugoslav Republic of Macedonia	2	0
Montenegro	2	N/A
Serbia	4	1
Kosovo *	3	17

* Note: In total, the number of such ECSO increased from two in 2001 to three in 2006. But since the number of questionnaires increased from 12 to 30, the percentages do not indicate the increases.

FIGURE 4

Distribution of topics among ECSOs

Note: For list of topics see the front inside cover.

Compared to the 2001 data, when education, awareness raising and conferences/meetings were the top work areas, we see continuity in the pattern of work of ECSOs in the region. Donors of ECSOs would be wise to bear in mind these priorities when setting their own funding priorities, as clearly the number of groups working in certain fields is sometimes limited.

A final set of data that has come from the directory survey is the age of the groups in the region. ECSOs were asked the date of their registration between four periods (before 1990, 1990-1995, 1996-2000, and after 2000). Results of this sample show that by 1990 a total of 33 groups had registered, 45 during 1991-1995, and 131 during 1996-2000, but since 2000 a total of 225 have registered (see Figure 5), meaning that the vast majority are less than five years old. These numbers are based on the question of when the organisation was first formed (they were later asked about the most recent registration in the following questions because in many countries the ECSOs have had to re-register as a result of new

legislation). Importantly though, the fledgling nature of these groups reminds us that support for building their capacity as institutions is still required.

While we have a picture of environmental civil society organisations in the West Balkans, we need to take a closer look in order to appreciate the finer details, thus further analysis of this data can be found in the corresponding country sections. To summarise, however, it appears that the movement has stabilised, more or less, in terms of active groups in the region (one could also argue growth has stopped). Many of these groups are quite young, being formed and/or registered in the main after the year 2000.

Overall, though, these groups have been able to gather more finances than in 2001 to carry out their projects, with average budget sizes tending to increase. As such it appears that the funds are concentrated into some larger more developed organisations and a band of “middle-class” groups. However, around one-quarter of ECSOs in the region have very limited funds, and in a number of

FIGURE 5

Year of establishment for ECSOs in South Eastern Europe

places (notably Albania, Croatia and Kosovo) this is a worryingly high percentage.

Memberships have fallen, but volunteering is up and the number of paid staff has increased, though in some countries they are perhaps still too small (Croatia on average has less than one paid staff person per organisation). As regards the priorities of the organisations they appear to have similar areas of interest, but some broadening is evident.

This pattern appears to demonstrate that the groups are still overly susceptible to the transition conditions in their countries. Croatian groups have had to contend with the change in funding patterns, demonstrated by their increased reliance on domestic sources, but also perhaps indicated by the low staff numbers. Kosovar and Albanian groups are split almost fifty-fifty between those with project funding and those with none, indicating a resource crisis for the movement, which in both cases depend heavily on the priorities of the foreign donor community.

The environmental movement in the region is doing valuable and much needed work

in keeping the environment on the agenda at both local and national levels, but that movement will still need a long period of involved and stable support to become better established. The challenge will be for the ECSOs to be able to prove their worth and to be accountable to their own communities. Only in that way can they hope to build awareness of their role and of civil society in general. That could lead to more domestic support for funds and for greater public involvement in their work. However, the challenge also extends to the donor community to take a longer-term and more patient approach to supporting the sector. In any case, building environmental civil society in the Western Balkans has no quick fix.

REC, Szentendre, Hungary**

NGO Directory online

The environmental organisations that took part in the survey are also included in the *NGO Directory of South Eastern Europe* (available online at: <www.rec.org/REC/Databases/NGO_Directory_SEE/Find.html>).

The user-friendly online database is continuously updated and offers the following four search options that can be used separately or in any combination:

- NGOs by country;
- NGOs by location (town);
- NGOs by name (English version); and
- NGOs by topics and activities (based on pre-selected lists of topics and activities).

The directory website has a number of interactive features that allow the user to:

- print a list of NGOs or individual entries;
- send remarks and suggestions to enhance the quality of the directory;
- request a printed copy of the latest edition of the NGO Directory; and
- submit NGO updates.

In addition, environmental organisations not listed in the directory can create a new entry for themselves and become part of the database.

Category 2 – 1991-1995

Category 3 – 1996-2000

Category 4 – 2001-2006

CHART 2

Level of working

(Data represent actual number and percentage of the total)

Comparison between 2001 and 2006 data

The survey covers 68 registered environmental civil society organisations (ECSOs) active in Albania. The data comparison between 2001 (when the previous REC survey was conducted) and 2006 shows a growth in the scope of activities, while the total number of organisations remains at approximately the same level. Since the 2001 survey, we see a slight increase in the number of groups (in 2001 we received 63 responses, compared to 68 in 2006). However, what is more pronounced is the dramatic increase in full-time and part-time employees working in the organisations. While in 2001 respondents admitted only 20 employees across 63 organisations, in 2006 there were 253 employees. In addition, the number of members has increased from 5,808 to 11,420. As many as 29,296 volunteers participate in the activities and actions organised by the Albanian environmental community.

The total operating budget has increased over the last five years from an estimated EUR 337,250 in 2001 to EUR 837,250 in 2006. However, there has also been an increase in the number of organisations operating with minimal budgets (either no budget or below EUR 500) from 42 percent to 51 percent in 2006. The data suggest two predominant types of groups. A majority of the groups operate with minimal or no budgets, while another set appears to be becoming financially stronger and more financially stable, involving more people than five years ago.

The picture of funding sources appears to have changed, with foreign and international grants increasing in frequency from third to first place. Now nearly 60 percent of all groups receive funds from this source, compared to 46 percent in 2001. Domestic donations/grants have gone down from 52 percent to 38 percent in the same period and membership fees from a high 87 percent to 50 percent. Clearly the sources of funding are dominated by foreign sources over domestic.

Regarding the main areas that Albanian groups work in, there has been an increase in the percentage of those groups that say they work on nature protection, forestry and biodiversity. However, together with environmental education these groups represented the main areas of work five years ago. Under the main activities of ECSOs, awareness-raising campaigns, information dissemination and organising conferences/meetings remain predominant in Albania.

The vast majority of the surveyed groups were formed after 2000 (60 percent). However, groups tend to work more at the local or regional levels with notably fewer organisations working nationally than previously. But compared to 2001, around double the number of groups is now working internationally.

Legal and regulatory framework

In Albania the legal formation of a CSO is still a difficult, confusing and time-consuming process, despite efforts to reform the law.

Albania has adopted a two-stage registration process, at the central and local levels. The first stage is for legal registration; the second for tax registration.

Problems are mostly reported with the second stage of registration. One reported problem is the uneven application of the law. As a result of the difficulties in registration, many ECSOs report that they operate without having formally completed all stages of registration, especially towards the tax authorities. Lawyers with personal connections are reported to be able to smooth procedures, although most ECSOs do not find legal services necessary.

While ECSOs are generally able to carry out their activities and operate within the legal framework, a great deal of frustration is expressed at the inconsistent application of the law in specific cases. In general ECSOs find the legal regime confusing with respect to financial operations. For example, while ECSOs may legally engage in commercial activities so long as they use the proceeds for their purposes, only a few do this, at least in

Main findings: Legal and regulatory framework

- The state of CSO registration law is partly in flux, especially with regard to tax and financial matters.
- ECSOs in the regions are particularly affected by the two-stage registration process.
- There are substantial opportunities to operate without full legal compliance and ECSOs often take advantage of this to avoid dealing with authorities.
- ECSOs that are able to comply with legal requirements can take advantage of a relatively favourable tax system.
- Authorities apply the rules inconsistently due to insufficient training, insufficient norm formation, or personal or official bias.
- General legal frameworks are in place but implementation and enforcement are lacking.
- Some positive experiences are evident in cooperation on law drafting, but without a legal framework.
- Albania's legal system does not accommodate genuine legal advocacy, and ECSOs consequently have not developed advocacy skills.
- Legal assistance and expertise are relatively important needs for Albanian environmental ECSOs.

part due to the concern that tax authorities would create problems. This may also contribute to the fact that a substantial proportion of ECSOs do not fulfil financial reporting requirements. There is an overall feeling that the law is not stable and at least a perception that authorities may sometimes create difficulties for ECSOs that are “opposed” to the government. On the other hand, compared to other countries in the region, Albanian ECSOs actually enjoy a higher proportion of tax exemptions.

The legal structure for access to justice in Albania is insufficient and does not provide real opportunities for advocacy. ECSOs share the extremely negative views expressed throughout the region on the overall implementation and enforcement of law, although they are slightly more optimistic about enforcement as compared to their neighbours. Some norms have been established for cooperation with authorities, especially in law drafting and planning, while ECSOs are awaiting a required legal framework. The legal framework for information and partici-

pation is in place, but the public is unable or unwilling to make use of it except to a very limited degree due to a lack of implementing regulations and practice. Several ECSOs consider legal expertise to be a major staffing need. Only a few training programmes in legal matters have been provided to environmental ECSOs in the past and they have reportedly stopped taking place.

Resource base

In Albania the picture presented seems to show that there is not a sufficient diversity or number of sources and that donors' priorities are generally driving the ECSOs' activities. The development of the movement, coupled to a reduction in the number of donors and shift in donor priorities, has led to a reduction in topics that are covered by funding and to increased competition between ECSOs. The danger to civil society appears to be that as more donors now begin to withdraw there will not be other domestic sources available to bridge the gaps that are appearing.

Main findings: **Resource base**

- Foreign project funds provide the main resources for the sector.
- In general ECSOs have unreliable information on the funding opportunities available. This is particularly true for ECSOs from outside Tirana.
- There is no overall policy or strategy for providing financial assistance from the government to ECSOs.
- ECSOs see promise in funding from the European Union (Commission), but they find it difficult to comply with EC funding procedures and requirements.
- For equipment resources Albania appears to be statistically better off than the SEE regional averages, but there are still significant numbers without equipment.
- One-fifth of ECSOs own their own office space (nearly double the SEE regional average), while around a quarter work informally or through the work places of their members. This represents quite different conditions for the groups working in the country.
- ECSOs need more support staff, such as network coordinators, public relations officers, fundraisers or financial administrators.
- Philanthropic activities in Albania are currently limited. Funding from private and self-generated sources is not common.

The most common type of funding is received from foreign/international foundations in the form of donations and grants, with over half of the groups responding receiving support from this source. These private sources of funding (from foundations mostly and not corporations or businesses) are the most important origin, with governmental/public sector support following closely behind. However, both of these sources tend to be more substantially foreign in origin than domestic. As in other countries, many Albanian groups do solicit membership fees (the second most frequent source, though much less frequent than five years ago), but the amounts gathered are not significant. Overall in Albania the picture is not promising for domestic sources of finances or for self-financing practices.

Albania exhibits an alarming tendency in CSO budgets, with more than one-third of the ECSOs sampled reporting that they had no budget in 2005 and a further sixth with a budget of less than EUR 500. This means that more than half of all the environmental

ECSOs in Albania are working within a very limited financial framework and a clear situation of “haves and have nots” has developed.

Human and organisational capacities

Generally ECSOs in Albania are well aware of strategic leadership tools and their importance for better performance. Although considered important by a large number, only the strategic planning and work plan are used by a substantive number of organisations. Strategies for fundraising, communication, PR and business are seldom used, although they are considered as important tools in raising money, diversifying the funding base, building a good image or communicating to stakeholders. Similarly, administrative procedures such as a project management system, operations manual, human resources and financial management are given great importance. However, the survey interviews have shown that the environmental organisations are not seen as being efficient, with some ECSOs stating that they “lack set administrative procedures within

Main findings: **Human and organisational capacities**

- Concepts of strategic leadership, process management and its tools are generally well known.
- Fundraising strategy is considered as the most important tool for strategic leadership, but few organisations exhibit a fully developed one.
- Governance bodies are generally weak and have limited influence in the work of the organisations.
- Communication and PR strategies are rarely developed, while many ECSOs perceive the need for better communication with the public and other stakeholders and for building a better image.
- Only 16 percent of the organisations consider their performance as successful. The main obstacles seen in their work are the lack of infrastructure and motivation of the members, but also external reasons such as indifference of citizens to environmental issues due to economic, social and political instability in the country.
- Donors, government and support organisations’ representatives consider that ECSOs tend to lack vision, transparency, and accountability, and to be donor driven, while the ECSOs themselves believe just the opposite.

the organisations.” Moreover, donors specifically criticise the weak financial management and reporting skills of ECSOs.

The limited usage of these tools is mostly due to the lack of capacity and knowledge for developing them, most of which are mentioned as training needs for building more sustainable organisations. The knowledge of what has to be done to be efficient is generally there, but the implementation in real life is missing. It is understood from the survey interviews that a different approach to capacity building is probably needed where the staff has the opportunity to experience implementation of knowledge through coaching and international exchanges of staff at CSO level. Most of the organisations have gone through a training needs assessment and training is used systematically for building capacity of the staff; however it is done mostly on an ad-hoc basis.

ECSOs in Albania have clearly set governance bodies (board, assembly, president or executive director), but the boards in particular are weak and mostly do not fulfil their expected roles. Consequently the staff also take over the main strategic and leadership work in the organisations. Only a small number of organisations considered that they had a fully successful performance in the past year, while the majority rated their performance partially or intermediately successful. The reasons given were mostly related to the problematic social, economical and political conditions in Albania, the short-term vision of donors regarding aid and the mistrust of citizens in ECSOs. While the ECSOs see themselves as having a strong base of expert staff, administrative procedures and response to real needs, it is important to note that other stakeholders consider the opposite. They feel that the ECSOs tend to lack vision, transparency, and accountability, and to be donor driven.

Organisations employ a small number of full- or part-time staff and only one in 116 are paid (the vast majority are volunteers). The

membership base of the organisations is generally not big due to the low interest of the population in environmental issues in the country or due to the low awareness of the population as regards ECSOs’ activities. While people join the movement out of a wish to help to improve the environment and health prospects of the citizens, many leave due to frustration related to the slow pace of change and low income. The Albanian ECSOs generally have a good gender balance, with slightly more men than women working in the movement.

Information and knowledge base

Regarding ECSOs “operating environment” (i.e. the external information landscape), over one-quarter described the general availability of sustainable development and environment information as inadequate. The interviewed ECSOs noted that information is either lacking or unavailable, that ECSOs are very much dependent on government sources and other support organisations for environmental data, that the environment ministry’s regional agencies do not have significant data available and that the media carries only limited information on the environment. Concerning quality, nearly all CSO survey respondents felt “some” or “large” improvement was necessary with regard to the currency (97 percent), presentation (90 percent) and reliability (87 percent) of official information.

Regarding its proactive *distribution*, typically more than 70 percent felt “some” or “large” improvement was necessary (vis-à-vis ease of accessibility, timeliness of delivery, media source distribution, electronic and printed formats, and availability through public information centres). Government responses to requests for environmental information were also evaluated negatively. With regard to improving mechanisms to exchange information with authorities, 93 percent welcomed physical fora, 87 percent virtual fora.

Main findings: **Information and knowledge base**

- Generally there is insufficient official sustainable development and environment information available to ECSOs, and that which is available is often of dubious quality (out of date, poorly presented, and unreliable).
- Distribution of official sustainable development and environment information (both proactive and passive) is problematic and improvement is requested by ECSOs.
- Almost all ECSOs welcome improvements in the exchange of information with authorities, both physical and virtual, not least because of a dearth of procedures and legal basis.
- Albanian ECSOs are significant sources of information, maintaining collections of environmental books, reports, brochures and pamphlets, and generally consider their knowledge capacities and skills on the environmental topics they work on as “adequate,” but nevertheless welcome additional training to enhance their internal knowledge.
- Cost is an obstacle to Albanian ECSOs gathering of information; most tend only to do this when financed through specific projects. Around half are equipped with the appropriate equipment to manage information.
- Pamphlets and brochures are the most popularly published forms of information. E-mail, independent newspaper articles or advertisements and Internet websites are used by ECSOs to distribute information. Although again cost is a significant constraint to widespread distribution (e.g. via the media), besides “processing power,” in order to present information in a way that is understood by citizens. Consequently there is little public reaction to many issues besides the initial media reaction.

The main challenge is the lack of a legal basis. One donor opined regarding the operating environment: “Because state monitoring is weak, the information is not easily available to the public and the professional interpretation of data is weak, the quality of dialogue with people and/or the government is poor.” Remedy this and “thereafter ECSOs can be more professional in making the point to the government, to make concrete proposals, to challenge the government in these ways,” the donor said

Concerning Albanian ECSOs’ own internal knowledge landscape, they are significant sources of information, with approximately 54 percent maintaining collections of environmental books, reports, and more than 61 percent brochures and pamphlets. Eighty-one percent described their organisation’s knowledge capacities/skills on the environ-

mental topics they work on as “adequate.” Nevertheless, more than 80 percent of survey respondents welcomed additional training to enhance their internal knowledge.

Concerning the tools and resources used to gather, manage, distribute and exchange sustainable development and environment knowledge, when gathering or researching primary data, Albanian ECSOs tend only to do this when financed through specific projects. While a lot of information can be gathered from the Internet, few Albanian ECSOs or people do so (because of the cost). Approximately half of Albanian ECSOs rely on desktop publishing equipment and database equipment to manage information. Pamphlets and brochures are the most popularly published forms of information besides verbal opinion and commentary during environmental decision-making

Main findings: **Accountability**

- Governmental policy or cooperation procedures towards ECSOs are absent, limited cooperation takes place with the pressure from ECSOs to government and its outcome depends a lot on the good will of decision makers. A few good examples of cooperation exist, though mostly at the local level.
- There are no rules or requirements regarding the selection and delegation of CSO representatives to different cooperative bodies with the government.
- ECSOs are not experienced in working with the general public to get them involved and mobilised in the decision-making process.
- Good interaction between ECSOs and local stakeholders usually exists but it often occurs within the framework of a project, has a top-down approach and its impact is limited.
- ECSOs are too dependent on donor initiative for their interaction with communities.
- Cooperation with national/local business is rather limited.
- The legislative framework for access to information and public participation is generally good, but implementation, enforcement and the lack of rules remain the key problems. ECSOs are most active in the field of public participation, and less active in making official information requests. Little has occurred in the access to justice field nationally or locally.
- ECSO involvement is generally well accepted in decision making, but it is not as critical as it might be for fear of repercussions.
- The lack of defined procedures on how to request information forces ECSOs to use an alternative information channel through personal contacts.
- Though endorsed by the environment ministry, guidelines on public participation procedures in the EIA process have rarely been followed in practice.
- Regarding public participation, ECSOs acknowledge that their role in local/regional/national decision making or development planning is consultative or participatory, but not yet influential. Public involvement at the local level tends to bring more satisfactory outcomes.
- Access to justice rights are not exercised individually or collectively.
- There is a lack of understanding among the general public and ECSOs on environmental rights guaranteed by Albanian legislation and ratified international conventions.

processes. E-mail (by 80 percent of respondents), independent newspaper articles or advertisements and Internet websites are used by ECSOs to distribute information.

The Center for Electronic Communication network is relied on for electronic distribu-

tion of various types of NGO-related news. According to one CSO, the media is a useful distribution mechanism too, but ECSOs appear to have no real possibility to share information with the public via the media. The main challenge, however, is that ECSOs simply do not have information to distribute.

ECSOs not only need to be equipped with the means to gather, process and give information, but also require the necessary processing power to give high quality information.

Accountability

The review of the current status of the public accountability in Albania concerning the legal and administrative provisions and practice of implementation of the rights derived from the Aarhus Convention has shown a tendency for increased elaboration and improvement of the legal instruments for the implementation of these rights. However, there is still a deficit of clear rules, practical guidelines and sometimes administrative willingness to inform the general public and ECSOs and involve them in the decision-making process. As such, cooperation between governmental bodies and ECSOs is insufficient and limited. The ECSOs are mainly taking the role of consultation and passive participation but not of real players who are influential and respected partners. The ECSOs perceive that effectiveness of the judicial system in environmental cases is also far from satisfactory.

At the local level cooperation is much better and relationships between different stakeholders more constructive: the ECSOs have developed good communications with the local communities, and relatively close cooperation with the media. Contacts with businesses are limited, partly due to their image in the eyes of ECSOs as polluters and unfair partners.

CHART 2

Level of working

(Data represent actual number and percentage of the total)

Comparison between 2001 and 2006 data

The survey for 2006 covers some 88 environmental civil society organisations that responded, compared to the 70 responding in 2001 (although 127 groups were listed in that directory). As such the results are fairly comparable. Overall, the data comparison between 2001 and 2006 demonstrates a general growth of ECSOs and their activities.

There has been a significant increase in the number of full-time and part-time employees reported to be working in the organisations. As of 2006 there are 222 employees working for 88 organisations (two-and-a-half employees per CSO on average), while in 2001 there were only 42 employees across the 70 organisations (less than one employee per CSO). In total, as many as 5,507 volunteers participate in the activities and actions organised by the ECSOs, compared to 343 in 2001. The only indicator where there is a decrease is in membership, which went down over the five years from 84,676 to 54,628 (20,000 of these reported in just one organisation).

The estimated total budgets have more than doubled from EUR 775,000 to EUR 1,767,000. However, there is an increase in organisations operating with minimal budgets (below EUR 500 per year) from 18 percent to 24 percent of those responding. Additionally, the indicators of budget distribution show that compared to 2001, when one percent of organisations with budgets above EUR 100,000 counted for 13 percent of the total of CSO budgets, in 2006 nine percent of ECSOs (or eight organisations) account for approximately 45 percent of the overall estimated total budgets. This signifies an increased concentration of funds into a few bigger organisations, while many more live on fewer funds or have no financial support.

The vast majority of Bosnia and Herzegovina (BiH) groups report that they work on environmental education/education for sustainable development, or nature protection and waste issues (92 percent, 82 percent and 78 percent respectively). Since 2001, waste has become

more important, as it was previously not listed among the top five priority areas, while tourism/eco-tourism seems less important in 2006. Regarding the main activities of work, awareness-raising campaigns and organising conferences and meetings remain the most common for Bosnian and Herzegovina ECSOs.

Looking into the distribution of foundation years it is evident that over four-fifths responding were registered after 2000. This denotes a very young sector. No groups are listed as being founded in 1991-1995, as much of this period took place during the war. In comparison with the absolute figures from the 2001 directory around half of the older groups appear to be no longer active. Regarding the level of working, the data for this directory is comparable with 2001 and so the sector has not appreciably changed its range of work.

Legal and regulatory framework

A high level of involvement of the international community in BiH has meant that the legal framework for registration of ECSOs is

in theory clear and simple. However, throughout the country (on state and entity levels) the application of the law has been inconsistent, resulting in delays of up to seven months and sometimes even in the denial of registration applications without a clear legal basis. The multiple levels of authorities have contributed to the morass. While ECSOs may register on the cantonal level, for example, they could face difficulties operating in other cantons. Legal services are sometimes “unofficially” required to speed processes. In general ECSOs expressed great dissatisfaction with registration procedures.

Upon attaining registered status, ECSOs generally are able to carry out their activities and operate within the legal framework. Commercial activities are permitted within certain limits (the rules are different depending upon the entity) and reportedly quite a few ECSOs engage in providing services, even to the extent of participating in joint projects with private companies. However, many ECSOs have trouble defining commercial activities and do not understand how to

Main findings: **Legal and regulatory framework**

- The legal framework for registration is good, but administrative practice is problematic.
- A multiplicity of authorities and jurisdictions creates obstacles for smooth operations of ECSOs throughout the country.
- Authorities apply the rules inconsistently due to insufficient training, insufficient norm formation, or personal or official bias.
- The tax structure is not yet developed and differs across jurisdictions.
- ECSOs provide services and engage in other commercial activities, sometimes in partnership with private companies.
- Despite CSO involvement in law drafting, there is a general lack of sense of ownership of the legal regime.
- Information and participation legal frameworks are in place but implementation and enforcement are lacking.
- BiH's legal system does not accommodate genuine legal advocacy, and ECSOs consequently have not developed advocacy skills.
- Legal assistance and expertise are relatively important needs for BiH environmental ECSOs.

channel generated funds into their organisation's purposes. Limited opportunities for tax deductions for donations are available. Value-added tax was only introduced to BiH in 2006 and it is not yet clear how it will be applied to ECSOs.

The legal structure for access to justice in BiH is insufficient and does not provide real opportunities for advocacy. Bosnian and Herzegovinian ECSOs are even more extreme than their neighbours in their negative views of legal frameworks, and the implementation and enforcement of law. The imposition of laws by the international community means there is very little sense of ownership of the legal system. The bright spot is the frequent involvement of ECSOs in law drafting that is reflected in the legal framework for information and participation. Implementation of the law is very spotted, however. Several ECSOs consider legal expertise to be a major staffing need. Only a few training programmes in legal matters have been provided to environmental ECSOs.

Resource base

The most common source of funding to Bosnian and Herzegovinian ECSOs is grants from the domestic government/public sector. These funds particularly come from local government sources. However, foreign foundation and government grants are also frequently received and tend to represent a higher financial contribution to CSO budgets than the domestic sources. Some international funders are changing their priorities, plus the mechanisms of funding are becoming more complex and the conditions of grants (such as co-financing requirements) are becoming more difficult for many Bosnian and Herzegovinian ECSOs to cope with.

Compared to other SEE countries Bosnia and Herzegovina exhibits a higher level of self-generated funds (service contracts and sales). This factor coupled to the planned Ecological Fund, which should support environmental ECSO projects, seems to show some promise for the development of domestically based and more permanent funds. As the blend of

Main findings: **Resource base**

- Over two-thirds of the sampled ECSOs receive funding from government grants (local and central).
- Local municipalities supply important, but usually smaller, funds to the sector.
- Foreign government funding has tended to become more specific and more complex to access, which has had an impact on ECSO activities (regarding issues covered and success rates).
- Overall groups have larger budgets than five years ago, but a significant number of ECSOs are still in the lower budget categories, with over 60 percent of groups reporting that they have financial difficulties.
- Staff turnover (staff retention) is a major problem for Bosnian and Herzegovinian groups.
- Many Bosnian and Herzegovinian ECSOs need to improve their fundraising and proposal writing abilities. However, there are some very experienced groups with complex and advanced marketing activities.
- There is a roughly fifty-fifty split between groups with good and poor equipment resources.
- Over two-thirds of ECSOs rent their office accommodation; but this cost is often ineligible or limited in many project funds.

Main findings: **Human and organisational capacities**

- The concept of strategic leadership, process management and its tools are generally well known, but have not usually been considered important for building efficient and effective organisations.
- ECSOs are generally well structured and flexible; however, none of the organisations interviewed had amended their structures in order to respond better to their mission.
- ECSOs' missions are dependent or driven by donor priorities, the level of local development or government policies.
- Only five out of 83 organisations surveyed on their level of performance consider their performance as unsuccessful. To the extent performances were less than expected the main obstacles given in hindering the work of ECSOs were the lack of interest in the environment, sustainable development and institutional building from the government, a lack of public support for the ECSOs' activities and the lack of expertise within the organisations themselves.
- ECSOs do not tend to cooperate with each other due to competition for funds.

funding sources gathered by groups is fairly diverse, the resource base in Bosnia and Herzegovina appears broader than in most SEE countries. However, the dependency on foreign funds is the dominant feature and the effect of the reliance on project funds on staff retention and the ability to pay for operating costs (such as rent) is noticeable from the groups' concerns.

Financially ECSOs in Bosnia, as a group, seem to be able to access more funds than in the past. Overall budgets have increased, with, for example, nearly one in 10 of the sample now in the plus EUR 100,000 category. However, there are still many groups which are failing to gather sufficient resources (one in four have annual budgets less than EUR 500).

Human and organisational capacities

Generally the survey showed that ECSOs in Bosnia and Herzegovina are well aware of strategic leadership tools but they do not rate them important for their better performance; they are not used by most organisations. The organisations surveyed feel that set strategies constrain their activities and they need to

stay flexible in order to fulfil donors' priorities. In addition it was expressed that the development of such tools would put too much work and time pressures on the already overworked staff. ECSOs evidently do not see the benefit in terms of effectiveness which such strategies would bring.

Similarly the research showed that some administrative procedures, such as an operations manual, are not considered important in the effective running of the organisations. However, financial and HR management, together with project management systems, are considered to be important for the organisations, and many of the ECSOs and other stakeholders recognise that their administrative procedures are weak and need improvement in these areas.

Capacity building is still a requirement among the Bosnia and Herzegovina environmental ECSOs. However, although a shift towards more current topics and forms of trainings was noted, there are still a big number of ECSOs which consider basic training still among support priorities. Most organisations have not gone through a training needs assessment yet, and training is not used systematically for building capacity of CSO staff,

Main findings: **Information and knowledge base**

- There is a general dearth of sustainable development and environment information, brought about by the fact there is little environmental monitoring in Bosnia and Herzegovina, and no agency coordinating ongoing activities, in terms of either processing or disseminating this information.
- The official sustainable development and environment information available to ECSOs is found to be of problematic quality (not up-to-date, poorly presented and/or unreliable).
- Distribution of official sustainable development and environment information (both proactive and passive) is insufficient and improvement is requested by ECSOs.
- Almost all ECSOs welcomed improvements in exchanging information with authorities, both physical and virtual, not least because many are not aware of the possibilities for public participation.
- BiH ECSOs are significant sources of information, maintaining collections of environmental books, reports, monitoring data and statistics, as well as environmental CD-ROMs and generally consider their organisation's knowledge capacities and skills on the environmental topics they work on as "adequate." They nevertheless welcome additional training to enhance their internal knowledge.
- ECSOs gather primary as well as secondary information for their work. Around half are not equipped with Information and Communication Technology (ICT) equipment, while one-third use desktop publishing and one-fifth use database equipment to manage information.
- Pamphlets and brochures are the most popularly published forms of information. E-mail and a wealth of non-electronic tools are used by ECSOs to distribute information, although cost is a significant constraint to more widespread distribution, besides adequate surveying know-how, "few skills in regard to preparing information for the media, such as press releases and public relations," and weak negotiation skills.

being done mostly on an ad-hoc/opportunity basis. However, many organisations are aiming to build a financially sustainable organisation for the future, and they have a very clear vision of their training needs in order to achieve this goal.

Quite a large number of the organisations consider that they had a fully or partially successful performance in the past year. However, the lack of interest in environment, sustainable development and institutional building from the government side, a lack of public support for the ECSOs activities and their own lack of expertise within the organisations are considered by ECSOs as the main reasons for weaker performance. While the ECSOs see themselves as having a strong

base of expert staff, good cooperation with stakeholders and transparency, it is important to note that other stakeholders consider the opposite to be true. Often they believe that the ECSOs fail to cooperate enough due to competition for funds, are donor driven and do not communicate with the public or respond adequately to society's needs.

Organisations employ a small number of full- or part-time staff, but a higher proportion than the regional average gets paid (one in 25). Also the membership base of the organisations is generally big (average of 621 members per organisation). While people join the movement due to the desire to make a change in society and improve the environment, many leave due to frustration related

to the slow pace of change and low salaries. The ECSOs generally have a good (equal) gender balance of people who are involved in the organisation.

Information and knowledge base

Regarding ECSOs' operating environment, 46 percent described the general availability of sustainable development and environmental information as inadequate, with 17 percent saying there is none. Interviewed organisations noted this is because there is no environmental information available at the state or entity levels to distribute. Concerning quality, practically all CSO survey respondents felt improvement was necessary with regard to the currency (99 percent), presentation (96 percent) and reliability (94 percent) of official information. The other problem expressed was that official information is often rather more descriptive, or too detailed, which makes it difficult to understand.

Regarding proactive distribution, typically more than 90 percent felt improvement was necessary (vis-à-vis ease of accessibility, timeliness of delivery, media source distribution, electronic and printed formats, and availability through public information centres). Government responses to requests for environmental information were also evaluated negatively. ECSOs in the Mostar region noted "sometimes it's necessary to rely on private connections to acquire information." With regard to improving mechanisms to exchange information with authorities, 89 percent welcomed physical fora, 92 percent virtual fora.

Concerning ECSOs' own internal knowledge landscape, ECSOs are significant sources of information, with approximately 63 percent maintaining collections of environmental books and reports, and more than 57 percent maintaining monitoring data and statistics, as well as environmental CD-ROMs. Seventy-four percent described their organisation's knowledge capacities and skills on the environmental topics they work on as "ade-

quate." Nevertheless, more than 90 percent of survey respondents welcomed additional training to enhance their internal knowledge.

When gathering or researching sustainable development and environment data, ECSOs in Bosnia and Herzegovina tend to rely on a diversity of sources, including fieldwork, official government sources, the media, and the Internet. Approximately half of ECSOs do not rely on any Information and Communication Technology (ICT) equipment to manage information, although 33 percent rely on desktop publishing equipment, and 19 percent on database equipment. Pamphlets and brochures are the most popularly published forms of information, besides newspaper and periodical articles. E-mail is most popularly used by 98 percent of respondent ECSOs to distribute information, while non-electronic sources include direct mail, independent newspaper articles or advertisements, posters and demonstrations, radio programmes or advertisements (by approximately 90 percent).

A diversity of challenges related to information handling were highlighted by the survey. These included ECSOs not taking surveying "seriously enough," or performing "a survey for the sake of a survey." Others included the cost and the fact that ECSOs often have limited skills in regard to preparing information for the media (such as press releases and public relations); and their weak negotiation skills towards industry. An underlying note was the opinion that "ECSOs need to build trust based on quality content."

Accountability

The review of the current status of public accountability in Bosnia and Herzegovina shows that the general legislative framework is developed and reflects the standards of the Aarhus Convention and EU legislation, although the convention still has not been ratified/acceded to. A series of laws has been adopted which are in line with these and basically ensure the implementation of rights

Main findings: **Accountability**

- Although there is no explicit document dealing with cooperation with civil society, there are a few bodies at the entity level related to environmental issues in which representatives of ECSOs can participate. However, it needs to be clarified how the CSO representatives should be delegated (elected/selected) and what the terms of their participation are.
- Cooperation between ECSOs and local communities is increasing, but it usually does not take the form of intensive and close collaboration such as involving them in working groups, expert groups, focus groups, etc.
- It is still not a general practice for ECSOs to work closely together on projects or concrete activities with the citizens or local governments on concrete initiatives or issues in partnership.
- There are no critical views on the side of ECSOs on how much they really listen to the needs of the citizens and communities or how much they represent the communities when developing their activities.
- Cooperation with businesses is at an early stage, with some groups changing perceptions and starting to build cooperation as opposed to confrontation.
- Although the legal framework entitles ECSOs to access information and participate in different types of decision making, ECSOs do not practice these rights enough and often do not know what their rights are, much less how to use them efficiently.
- Despite improvements regarding access to information, the establishment of proper information flow among different authorities, collection of information, making available and providing the information to the public in a proper way and format is still a problem (particularly electronically).
- Although public participation rights are included now in the laws regarding permitting, EIA, SEA, and planning as well as water, waste, nature conservation issues, the implementation of procedures is hindered by practical problems of how to carry out notification and information related to EIAs or how to organise a public hearing, how to take comments into account, etc. The lack of proper notification and information provision related to the EIA can be an obstacle for the public and ECSOs to be prepared and be able to participate.
- ECSOs are involved as partners in public participation in EIA, developing strategic documents, and laws, and in the process of developing environmental action plan documents. During the EIA procedure the main problem is often with the provision of information, the clarity of documents and how the CSO/public comments are taken into account.
- The access to justice pillar is far from being implemented, which is linked with the general administrative and judicial reform. This needs years to bring results, due to the lack of knowledge about the rights of citizens, how those rights can be exercised, the lack of free legal assistance and advice to support the citizens in complaining when their rights are infringed.
- Rights of access to justice in environmental matters are not practiced, and there is no access to legal advice or support for CSO and citizens when they need it. As such, there have not been any appeals or court cases in BiH on environmental issues.

on access to information, public participation in decision making and access to justice in environmental matters at a similar level. These are not yet fully implemented in practice, but there have been some improvements lately, according to both officials and ECSOs in the implementation of access to information and public participation requirements.

The more detailed implementing regulations, rules and guidance materials that would fill in the gaps and support the more efficient application of the access to information and public participation requirements in practice are often missing. The financial and human resources are also not appropriate to support the more effective functioning of institutions and mechanisms. The situation regarding access to justice is lagging behind. Enforcement and a lack of clear rules and procedures remain key problems.

There are some legally established institutional opportunities for the cooperation of government authorities with ECSOs in Bosnia and Herzegovina, but these are new, not used or not yet fully utilised. These bodies need to be developed further in order to make them function more effectively.

Category 4 – 2001-2006

CHART 2

Level of working

(Data represent actual number and percentage of the total)

Comparison between 2001 and 2006 data

From 2001 to 2006 the number of questionnaires the REC received through the survey declined from 107 to 70. This reduction makes direct comparison more difficult, though the averages are helpful.

In 2001 Croatian environmental organisations reportedly had 80,183 members (with 55,000 in just one group which is not included in the 2006 survey), compared to only 16,739 in 2006 (the largest group has 5,350). There appears to be some reduction in membership (even without this one group). However, considering the number of employees in the sector and volunteer involvement there has been a general increase over the five-year period. The number of employees increased slightly from 58 to 69 and the number of volunteers from 1,530 to the present number of 6,174 (even with the smaller sample). Also the ratio of paid to unpaid staff decreased from 1:26 to 1:89. Importantly, the average number of paid staff per CSO has exhibited an increase as well, though there is still on average only one paid employee per CSO.

The total estimated operational budget has increased from EUR 964,750 to EUR 1,616,750 (again even with a smaller sample). The average Croatian ECSO has an estimated EUR 22,771 per year, comparing favourably to EUR 9,552 in 2001. The portion of ECSOs operating with a minimal budget (less than EUR 500) has gone down from 35 percent to 21 percent.

In 2001, only 3 percent of organisations reported a budget over EUR 100,000. As of 2006 it is 10 percent and the groups in this category represent an estimated 43 percent of the total CSO budgets (compared to 31 percent before). These data indicate gradual concentration of the funds into the bigger and more professional organisations, while there is a decrease in the number of smaller ones (though still one in five).

In the sources of funds we see an interesting development in Croatia. Foreign/international

al grants were not ranked among the top three sources of financing in 2006. In 2001 they ranked as the third most important source. Membership fees and domestic government donations/grants and domestic corporate sponsorship are the three most common sources of funds. In this respect Croatia stands out among the surveyed countries.

There is not a significant shift of priority areas among the Croatian ECSOs. Environmental education, biodiversity and tourism were highly selected priorities both in 2001 and 2006. The new topic gaining attention in 2006 is waste issues, which may indicate growing impact of the production and consumption patterns and the growing tourism industry. Education, awareness-raising campaigns and information dissemination remain the most frequent activities in 2006.

There is a rather telling shift in the ages of groups from 2006 and 2001 data. Previously the most common category (marginally) contained those groups formed before 1990.

Now these do not feature prominently. The even spread of registration has changed to a predominance of groups registered from 2000 onwards.

As to the level of working, the importance of local work has evened out with the more regional activities of groups. Perhaps this reflects a broadening of the scope of environmental civil society beyond local activities.

Legal and regulatory framework

Croatia has adopted a simple and streamlined registration process that is highly appreciated by the CSO community. It also provides guidance and assistance in registration so that legal services are not necessary. Croatian ECSOs take their legal requirements seriously and work to ensure that their status is consistent with their actual activities. However, this ease of registration only applies to associations and the establishment of a foundation is rather complex and difficult.

Main findings: Legal and regulatory framework

- The legal framework for registration is likely the best in the region.
- ECSOs take their legal status and legal requirements seriously, although some also stretch legal limits.
- Excessive legal requirements inhibit the establishment of foundations.
- The repeal of VAT exemptions and a generally unfavourable tax regime has contributed to a lack of trust between the civil society and authorities.
- “Homeland” (national culture and folklore, patriotism, war veterans, etc.) CSOs are treated more favourably.
- A lack of responsiveness of authorities to information requests and attempts by ECSOs to participate in decision making lead to the impression that they do not consider ECSOs to be partners.
- Information and participation legal frameworks are in place, but implementation and enforcement are lacking.
- Croatia’s legal system is not very favourable to genuine legal advocacy, although there is a higher rate than in other parts of the region.
- ECSOs consider legal assistance and expertise as among the most important staffing and training needs.

At the same time, Croatian CSOs freely admit that they often stretch the rules when it comes to legal requirements, especially in finances and taxes. The present tax regime is considered to be very unfair to CSOs, and the groups surveyed do not perceive that this will change in the near future since they consider that the current government is “unfriendly” to CSOs. A sore point is the repeal of the value-added tax exemption for CSOs in 2004, contributing to Croatia’s position as one of the countries in the region with the least friendly tax regime for CSOs and causing several international organisations to leave. However, tax deductions are available for some donations and in addition special VAT-exempt status is accorded to “homeland” CSOs. Despite great strides in funding of CSOs from the budget, through the National Foundation for Civil Society

Development, governmental processes and its relations with the CSO community are considered to be non-transparent.

The legal structure for access to justice in Croatia is insufficient but there is slightly more advocacy evident than in other SEE countries. Croatian CSOs share with Bosnia and Herzegovina an extremely negative view of legal frameworks, as well as of the implementation and enforcement of law. They are also comparatively rarely involved in legislative drafting, one positive example being the law on packaging waste. Nevertheless, Croatia has done a good job of developing the legal framework for information and participation, and has even developed online forms for information requests. Yet results are disappointing, and CSOs have a strong impression that authorities are unsympathetic to CSO engagement. A large proportion of

Main findings: **Resource base**

- Domestic sources of funding have seen an increase over the last few years.
- The National Foundation for Development of Civil Society has increased domestic sources of funds, although it might have too much dominance in the sector as a funder. However, such an approach may serve as a model for other SEE countries.
- Local government programmes are important but suffer from unclear procedures and criteria, though the situation is improving.
- Foreign donors are withdrawing; importantly, their role in supporting less politically favoured activities might be missed.
- Generally, Croatian environmental ECSOs exhibit a more positive financial status than their SEE colleagues.
- Donor priorities are criticised for not matching the needs of the ECSOs.
- Two-thirds of Croatian groups state that they have adequate equipment resources, which is much higher than the regional average.
- More than one-third of Croatian environmental groups work from informal office space or require none at all.
- Croatian ECSOs find it difficult to retain professional staff, as they cannot offer competitive salaries.
- A small number of ECSOs are successfully practicing self-financing.
- Organised philanthropy development appears to be taking off slowly in Croatia. However there are positive indications for increases of corporate support.

CSOs consider legal expertise to be a major staffing need and some requested additional training in this field.

Resource base

In Croatia the funding situation presents a very different picture from that of the other SEE countries, where foreign aid tends to dominate. For Croatian ECSOs membership fees was quoted as the most common type of funding source, with domestic government grants as the second most common type and domestic business/corporate sponsorship/grants third. Although membership fees are a common source of funding as a source they appear less important in terms of revenue generation for most ECSOs. Consequently the most significant source is that of domestic government/public sector grants/donations. However, foreign foundations grants are more important than those of domestic foundations.

Evidently Croatian civil society has moved somewhat from the traditional bias towards foreign funds and diversified into domestic sources from public and private donors. The differences in the composition of resources for the sector compared to other SEE countries can be explained by the significance of

central and local government sources as a proportion of the funding sources for ECSOs, especially of the National Foundation for Development of Civil Society. This reflects a “filling-out” of the domestic sources, coupled to the reduction in foreign sources of aid. However, self-generated funds do appear less critical at this time for Croatian ECSOs, and funding from public sector contracts is still quite infrequent, perhaps marking a lack of awareness or trust in relation to service provision by ECSOs.

The average size of an ECSO budget has increased significantly in Croatia in the last five years. In 2001 the REC recorded the under EUR 500 category as the most common budget size. Now EUR 10,001-50,000 is the most common, with EUR 5,001-10,000 of a very similar proportion. However, the current sample is smaller and may account for some of the change. Also, one in five Croatian environmental groups still report a budget of less than EUR 500 per year, a significant number.

Human and organisational capacities

Generally ECSOs in Croatia are well aware of strategic leadership tools and their importance for better performance. They are also good at the development and use of these

Main findings: Human and organisational capacities

- The concepts of strategic leadership, process management and its tools are generally well known and widely used by Croatian ECSOs.
- Many ECSOs perceive the need for better cooperation and communication with the government as urgent, as are more interest and involvement of the public in environmental issues.
- ECSOs are very much orientated towards European Union accession issues.
- Croatian groups are generally strong, but there is a danger regarding their ability to implement projects due to a lack of staff; lack of infrastructure, especially for small organisations; and relatively weak support from the general public, which supports CSOs to varying degrees in different parts of Croatia (support from the general public is generally stronger in the north, west and northwest of Croatia due to the more intensive economic development).

plans in responding to the operating environment, and enabling the organisations to attain their missions.

Structurally Croatian ECSOs are quite flexible, showing in the way that they can restructure that they are generally strong organisations which can withstand changes. Most Croatian ECSOs surveyed considered that they had performed successfully over the last year. However, they are still having problems in communication and cooperation with the government and in getting the public more interested and involved in environmental protection activities.

A lot of the activities of the Croatian ECSOs are focused nowadays on issues regarding EU accession and also towards accessing EU funds for projects. Therefore the ECSOs need to become more informed on EU structures, regulations, requirements, and funding. Plus they need to become trained in how to write proposals for accessing EU funds. Notably, ECSOs admit that the EU accession issue, government agendas or donors priorities are exerting an influence on the performance of their missions, with only a small number stating that their mission is not influenced by them.

Capacity building among the Croatian environmental organisations is still mentioned as a need. However, as the ECSOs are more developed than in the other SEE countries, capacity building is needed more towards helping the organisations to increase professionalism or to expand towards more involved areas such as EU accession, self-financing and self-sustainability and legal issues.

Organisations employ a small number of full- or part-time staff, with only one in every 89 being paid, contributing to Croatia having one of the lowest totals of paid staff per organisation in the entire SEE region. Generally groups feel that there are a lack of experts working in the movement and also not enough young people willing to join ECSOs. Thus people working for environmental organisations are overloaded and risk burning

out. This factor, added to the fact that they have low incomes, does lead to a high staff turnover. The ECSOs have a good gender balance on the whole, with slightly more women than men working in the movement.

Information and knowledge base

Regarding ECSOs' operating environment, 43 percent described the general availability of sustainable development and environment information as inadequate, while 50 percent find it adequate. ECSOs note that the environment ministry website carries an extensive amount of information, but that at the same time there are lots of databases closed to the public. Concerning quality, practically all CSO survey respondents felt improvement was necessary with regard to the currency (92 percent), presentation (92 percent) and reliability (82 percent) of official information.

Regarding its proactive distribution, typically more than 80 percent felt improvement was necessary (notably the ease of accessibility, media source distribution, electronic and printed formats, and availability through public information centres). Official responses to information requests were also evaluated negatively, with surveyed ECSOs noting that many ECSOs depend on information received from unofficial channels and the quality and availability of official information is very dependent on who is asked. In addition ECSOs feel that local level authorities have very poor information gathering mechanisms and that it is only good in some counties. With regard to improving mechanisms to exchange information with authorities, 85 percent welcomed physical fora and 82 percent virtual fora.

Concerning the ECSOs own organisational environment, ECSOs are significant sources of information, with approximately 66 percent maintaining collections of environmental books, articles, and press releases. More than 55 percent maintain collections of brochures, environmental CD-ROMs, monitoring data and statistics. Eighty-two percent described their organisation's knowledge

Main findings: **Information and knowledge base**

- There is some weakness in the sustainable development and environmental information available for public consumption, mainly due to the fact that there is no effective system for its dissemination, at least in their opinion.
- Official information available to ECSOs is found to be of problematic quality (out of date, poorly presented, or unreliable).
- Distribution of official sustainable development and environment information (both proactive and passive) is reported as insufficient and improvement is requested by ECSOs.
- Almost all ECSOs welcomed improvements in exchanging information with authorities, both physical and virtual, at the same time requesting the government's greater openness to debate and accountability.
- Croatian ECSOs are significant sources of information, maintaining collections of environmental books, articles, and press releases, besides brochures, environmental CD-ROMs, monitoring data and statistics, and generally consider their organisation's knowledge capacities/skills on the environmental topics they work on as "adequate." All nevertheless would welcome additional training to enhance their internal knowledge.
- ECSOs tend to gather secondary information for their work. Around half are equipped with desktop publishing and database equipment to manage information, and a fifth with GIS.
- Pamphlets, brochures and articles are the most popularly published forms of information. E-mail and a wealth of non-electronic tools are used by ECSOs to distribute information. Significant constraints to more widespread distribution cited by ECSOs include limited media interest and "censorship."

capacities/skills on the environmental topics they work on as "adequate." Nevertheless, all survey respondents welcomed additional training to enhance their internal knowledge.

When gathering or researching sustainable development and environmental data, ECSOs in Croatia tend to rely on a diversity of sources, including private contacts, official government sources, other ECSOs, and trans-boundary e-mail networks. However, it appears that few Croatian ECSOs are doing their own research unless it is funded through a specific project.

Approximately half of Croatian ECSOs rely on desktop publishing equipment and database equipment to manage information, while as many as 20 percent rely on GIS tools. Brochures and newspaper/periodical articles are the most popularly published forms of information (by almost half of Croatian

ECSOs). One-fifth publish pamphlets. Telephone, fax and e-mail are most often used (by 100 and 98 percent respectively) by respondent ECSOs to distribute their information. Popular non-electronic sources include direct mail, independent newspaper articles or advertisements, posters and demonstrations, and radio programmes or advertisements (by approximately 95 percent). Among the challenges raised vis-à-vis information handling were making reports and other sources that can be understood. Websites were felt to be ineffective (few hits) and press conferences effectiveness depends too much on media interest, with messages often "filtered."

Accountability

The review of the current state of public accountability in Croatia shows that due to the EU accession process and recent ratifica-

Main findings: **Accountability**

- Positively, Croatia has official structures for and policy on cooperation with civil society organisations, reflected by regional partnership committees and the National Foundation for Development of Civil Society.
- ECSOs claim that there are no specific rules regarding the selection and delegation of CSO representatives to different cooperative bodies with the government.
- Authentic cooperation exists with local communities and citizens. Regular contact and activities are made with municipalities.
- Public lack of trust towards ECSOs can still be found. More visibility and transparency of their work is needed, including presentation of annual and financial reports. Croatian groups need to better demonstrate their impact and results.
- Some ECSOs have developed a strategy to work with businesses, though cooperation on initiatives varies widely from good and constructive to more-or-less sporadic and ad hoc.
- There are enough legal tools to implement the recently adopted Aarhus Convention, but enforcement remains a problem. As such ECSOs are very critical towards every aspect of access to information, public participation and access to justice.
- ECSOs say that they face limited access to information, as the practices of delivering information are weak, information requests tend not to be answered in the required timeframe, or they are incomplete. Nevertheless, ECSOs are more positive about the environment ministry than other ministries.
- A substantial obstacle for exercising Aarhus rights under the environmental impact assessment procedures is the requirement of legal interest for participation in public hearings, which limits the involvement of ECSOs.
- Access to justice is difficult. It is not always clear to whom to appeal (in a case of limited access to information, for example).
- ECSOs are the most active on the field of public participation, but less active in making official information requests. Little has occurred in the field of access to justice.

tion of the Aarhus Convention most of the horizontal legislation regarding the access to information, public participation and access to justice has been transposed to the domestic laws. However, ECSOs expressed that there is an inclination to opt for a minimal approach to legal requirements from the EU directives. As such legal tools exist the procedural requirements and practical implementation are not well developed, especially with regard to access to justice rights.

One substantial obstacle to exercising

Aarhus rights in Croatia is the requirement of legal interest for the participation in public hearings under the environmental impact assessment procedures, which limits the involvement of ECSOs.

Positively, Croatia has official structures for and policy on cooperation with civil society organisations, reflected by regional partnership committees and the National Foundation for Development of Civil Society. However, ECSOs say that there are not yet specific rules regarding the selection and delega-

tion of CSO representatives to different cooperative bodies with the government. As a result they feel that the involvement of ECSOs is rather ad hoc and not transparent. Also the factors that are influencing the development of the legal and administrative frameworks tend to be external, led by the EU accession obligations and donor programmes. The capacity and will of the state administration should be increased in order to facilitate cooperation with the movement to a greater extent.

Croatian ECSOs have developed good modes of cooperation with different partners, such as the general public and local communities. For example, with the local authorities, ECSOs have managed to link their priorities with those of locally focussed projects, such as help to handicapped people and senior citizens, eco-tourism and nature bicycle routes, and spatial planning projects. However, there are some issues that the environmental groups could address better (like waste management) and the visibility and transparency of the work of ECSOs could be presented further by improved sharing and publicising of their project results.

ECSOs report that the status of their cooperation with businesses varies from a good and constructive cooperation at local level to sporadic and ad hoc with larger companies. However, much of the cooperation is based on personal contacts. Good examples include concrete projects regarding a wastewater treatment plant and a river coalition on water management.

Category 3 – 1996-2000

Category 4 – 2001-2006

CHART 2

Level of working

(Data represent actual number and percentage of the total)

Comparison between 2001 and 2006 data

There has been a small decrease in the number of Macedonian ECSOs which submitted the questionnaire for the survey, from 67 in 2001 to 50 for this edition. Despite this drop, the survey reveals a significant increase in formal employment in the sector over the intervening five years: From a mere six people reported working full- or part-time in the 2001 directory to the present 62 (just over one person per CSO). Also the number of volunteers participating in the work of the Macedonian movement has increased from 337 to 3,010 in the same period. Both are promising trends. However, the trend in memberships has taken a significant downturn from 33,716 (15,000 was reported in just two groups) to only 7,466. As such the average number of members per CSO is now 149, with the highest for one group being 900 persons.

Over the last five years the estimated total budget in the sector has increased from EUR 433,000 to the amount of EUR 713,750 (even with a smaller sample). This increase is also reflected in the average budget of Macedonian organisations, which went from EUR 6,561 to EUR 14,275 in the same period. In addition the proportion of ECSOs with a budget of less than EUR 500 went down slightly from 21 percent to 18 percent. There was no organisation reporting a budget above EUR 100,000 in 2001, while now there is one such group.

Foreign funding through foundations' grants has become the principal source of income in the sector. Membership dues remain the second most widespread source, while domestic government/public sector grants and donations are ranked third most frequent.

Environmental education and nature protection remain popular priority topics of the Macedonian environmental community (94 and 74 percent, respectively). However, forestry is no longer ranked among the top five priority areas (as it was in 2001) and the newer areas with wider popularity that have come to the fore in 2006 are sustainable

development (not a category in 2001), tourism (sustainable and eco-tourism) and waste issues. Awareness-raising campaigns and education remain among the top activities in the former Yugoslav Republic of Macedonia in 2006 as they were in 2001, while conference meetings and lobbying were replaced by the fieldwork and information dissemination categories jointly.

The data reflecting the year of foundation show an almost equal split between those groups that were formed in the 1996-2000 period and those after the year 2000. Regarding the level of working the importance of national and international work has gone down from 2001, with local and regional work now more clearly the areas where ECSOs' activities are taking place.

Legal and regulatory framework

Registration of CSOs in the former Yugoslav Republic of Macedonia is not difficult or burdensome. Nevertheless, the process can take up to several months waiting for final approval by a judge. Legal assistance is generally unnecessary, but could benefit those CSOs from outside the capital. A new law on citizen associations has been under development for several years. A new law on dona-

tions and sponsorship of public activities entered into force on July 1, 2006, which includes new incentives for private donations to ECSOs from businesses.

Macedonian ECSOs do not consider that the country's laws present any obstacles to their operation. But this is not because the laws are supportive of CSO activity. Rather it is because the laws are perceived to be aspirational, overly general and incapable of enforcement, therefore resulting in a relatively low rate of compliance with specific legal requirements. The former Yugoslav Republic of Macedonia showed a shockingly low rate of financial reporting among ECSOs. They also take advantage of possibilities to mix commercial activities with their public purposes to a greater extent than in other parts of the region. Yet, the ineffective but flexible legal framework is a source of anxiety for many Macedonians, as shown by a high rate of dissatisfaction with the current legal regime for ECSOs. A major bone of contention is the fact that ECSOs generally have the same tax burden as for-profit companies.

The legal framework for information and participation is good, but public authorities do not have sufficient skills, training and developed procedures to implement the relevant

Main findings: Legal and regulatory framework

- The legal framework for registration is good, but procedures can be time-consuming.
- ECSOs generally do not benefit from tax advantages, and have the same tax treatment as for-profit companies.
- Many ECSOs mix for-profit activities with public benefit activities, often through establishing separate but linked legal entities.
- Many ECSOs do not adequately implement particular legal requirements, especially those related to governance and financial reporting.
- Legal frameworks for information, participation and other matters relevant to ECSOs are well-developed according to international standards, but actual implementation is problematic.
- ECSOs are well represented in legislative drafting processes.

law. Macedonian organisations claim to make use of legal and administrative procedures to promote their interests, but actual reports of cases are rare. Although numerous instances of authorities not following the law, for example in environmental impact assessment procedures, were identified, these generally did not result in legal challenges. However, the former Yugoslav Republic of Macedonia has one of the highest rates of involvement of ECSOs in law drafting in the region. Some ECSOs consider legal expertise to be a major staffing need and that more advanced training on legal issues is needed.

Resource base

The results of the research show that the former Yugoslav Republic of Macedonia's environmental sector is still broadly dependent

on traditional grant support, with more innovative forms of funding less evident. Foreign foundation support is the most important in terms of frequency and budget contribution. Domestic government grants, membership fees, domestic foundation grants and domestic business donations are in the next level of frequency for the movement. As such the resource base of the movement is mixed, but is not deep enough and consequently ECSOs suffer from changes in donor priorities.

Funding from governmental sources appears to have stagnated. Plus there is much criticism from the ECSOs on the mechanisms and the transparency used by central government. Positively there appears to be more cooperation developing between ECSOs and local authorities and more use of service contracts for ECSOs. Financial support from the European Commission and Global Environment Facility

Main findings: **Resource base**

- Foreign funds dominate the resource base of environmental ECSOs in the former Yugoslav Republic of Macedonia, but that funding is perceived to be declining and/or changing its scope.
- Private foundations funds (domestic and foreign) are the most financially important types of sources followed by public grants (foreign and domestic).
- Domestic government service contracts appear to be of increasing importance, but for government grants the amounts remain relatively low and the procedures are not considered transparent enough.
- There is little consistent information on government funds currently available to ECSOs.
- The process of decentralising government to the local authorities is an opportunity for ECSOs to build-up a broader and more locally rooted resource base.
- Since 2001 the average budget of Macedonian ECSOs has increased strikingly, with the EUR 10,001-50,000 range now representing the biggest category (previously it was the EUR 1,001-5,000 range). However a significant number (one in five) have budgets of less than EUR 500 per year.
- There is a roughly fifty-fifty split between the ECSOs that report good finances and those with unstable or poor ones.
- One in five Macedonian ECSOs surveyed have their own accommodation, representing a good platform for future activities. However, 70 percent rent, requiring continuous funding just to keep an office.
- There is some early potential shown in working with corporate sponsors.

are widely believed to be promising developments by many environmental groups.

Overall the movement exhibits an almost equal split into those groups with enough project support and those without. Resources appear to be more limited for environmental issues or are increasingly more specifically focused (such as rural issues). Despite this the budgets of those ECSOs with funding have increased markedly in the last five years.

Human and organisational capacities

Generally ECSOs in the former Yugoslav Republic of Macedonia are well aware of strategic leadership tools and their importance for better performance and are also good at development and utilising long-term strategy and annual work programmes, action plans and fundraising activities. Macedonian organisations also have set governance structures and even when they operate with a small number of staff they have well established internal structures. These make the Macedonian ECSOs among the most functionally organised ECSOs in the SEE region. Structurally Macedonian ECSOs are quite flexible, showing in the way they restructure that they

are generally strong organisations which have attained a fair level of organisational maturity.

Most Macedonian ECSOs surveyed consider that they had a successful or very successful performance over the last year. However, they admit that they are still lacking somewhat in cooperation with the local authorities and suffer from having to follow donor priorities. Despite this most ECSOs in the former Yugoslav Republic of Macedonia say that their missions are not donor or government driven. They feel that the main influencing factors in their missions are the needs of the environment or the stakeholders they are serving. However, how and when they implement activities clearly does depend on donors, and their programmes, and on government priorities.

Organisations employ a small number of full- or part-time staff; with the vast majority as volunteers (one in every 49 gets paid). The ECSOs generally have a good gender balance with slightly more men than women working in the movement. However, there is a lack of experts working in the movement and donors and support organisations consider that ECSOs are not professionally

Main findings: Human and organisational capacities

- Overall the concept of strategic leadership, process management and its tools are generally well known and widely used.
- Macedonian ECSOs appear to be relatively well structured and adapted organisations.
- Many ECSOs perceive the need for better cooperation and communication with the government as urgent and for more interest and involvement of the public in environmental issues.
- The legal framework is a disincentive for attracting volunteers as reimbursements are taxed as personal income.
- Internal dissent among many of the (mostly bigger) environmental organisations has prevented them from performing according to their potential and from building a better public image of the sector.
- ECSOs appear generally strong, but there is a danger regarding their future project implementation abilities due to a lack of staff, weak support from the public and sometimes a lack of infrastructure and access to funds (especially for small organisations from rural areas).

grounded as they lack the possibility to offer stable employment. Coupled to this they see that they have low membership, weak governance and leadership (quite different from what the ECSOs themselves believe), as well as a low capacity for research and information provision, lobbying and proactive participation in decision-making process.

Generally the training provision in the former Yugoslav Republic of Macedonia is considered to be good enough, but there are specific needs that ECSOs have expressed in order to be more sustainable in the future, such as: PR, project management, sustainable development, EU fundraising, staff management, administration, monitoring and evaluation of projects, financial management and accounting, organisational management, self-financing, and the role of NGOs in policy making and decentralisation. The ECSOs would prefer to have trainings tailored to their specific needs and exchanges of experience.

Information and knowledge base

Regarding ECSOs' operating environment, 56 percent described the general availability of sustainable development and environment information as adequate, 30 percent inadequate. The media is felt to carry limited information on the environment, while insufficient official information was cited as preventing ECSOs from working with local communities. However, a Skopje-based support organisation conceded that official data does exist and that it does not take too much effort to access it.

Concerning quality, almost all CSO survey respondents felt improvement was necessary concerning the currency (95 percent), presentation (90 percent) and reliability (84 percent) of official information. Regarding its proactive distribution, more than 80 percent felt improvement was necessary (regarding ease of accessibility, media source distribution, timeliness of delivery, printed formats, and availability through public information centres). The environment ministry has made

considerable efforts to ensure widespread distribution of its information, and ECSOs note that more official information is being put to the web, but it is sometimes considered insufficiently comprehensive.

Many aspects of official responses to information requests were evaluated negatively by more than 70 percent of respondents, with one interviewed CSO noting the Ministry of Agriculture and Forestry "simply never replies to any requests" while with the environment ministry said "it depends a lot on what you ask for." However, the procedure to acquire information seems to have become harder. With regard to improving mechanisms to exchange information with authorities, 75 percent welcomed physical fora and 79 percent virtual fora.

Concerning the ECSOs' organisational environment, more than 53 percent maintain collections of environmental books, brochures, CD-ROMs and reports besides pamphlets and press releases. Seventy-one percent described their organisation's knowledge capacities/skills on the topics they work on as "adequate." Nevertheless, all survey respondents welcomed additional training to enhance their internal knowledge. This is validated by opinions from the survey, which express that ECSOs are often not knowledgeable enough, or interested in, discussing most technical issues with the government on level terms. Perhaps this is due to a lack of expertise. Among those topics where ECSOs welcomed additional training, were the following: environmental education/education for sustainable development; environmental legislation; environmental policy making; nature protection and water issues.

When gathering or researching sustainable development and environment data, one support organisation considered ECSOs to be not particularly effective or well practiced in this (even to the point that they are unaware of the need for, or even apathetic to the importance of, gathering their own information). Sixty-one percent of the ECSOs in the former Yugoslav Republic of Macedonia rely on database

Main findings: **Information and knowledge base**

- While the availability of official information is generally considered adequate by ECSOs, they state that it is often of insufficient quality (not up to date, poorly presented and/or unreliable).
- Diverse mechanisms for the distribution of official sustainable development and environment information (both proactive and passive) were described, although improvement is requested by ECSOs, including official responses to information requests.
- Almost all ECSOs welcomed improvements in exchanging information with authorities, both physical and virtual.
- Around half of ECSOs in the former Yugoslav Republic of Macedonia maintain collections of environmental books, brochures, CD-ROMs and reports. Three quarters consider their organisation's knowledge capacities/skills on the environmental topics they work on as "adequate." Nevertheless, all welcome additional training to enhance their internal knowledge.
- ECSOs tend to be ineffective in undertaking their own data research. Almost two-thirds are equipped with database equipment to manage information, while less than a one-fifth use desktop publishing equipment.
- Pamphlets and brochures are the most popularly published forms of information, alongside press releases and newspaper/periodical articles. E-mail, CD-ROM, direct mail, telephone and fax are most popularly used by ECSOs to distribute information. One CSO support organisation noted, "websites of NGOs are usually good." (Around 88 percent rely on Internet websites).

equipment to manage information, while 17 percent rely on desktop publishing equipment. Brochures and pamphlets are the most popular published forms of information (used by up to half of Macedonian ECSOs) alongside press releases and newspaper/periodical articles, although it was noted in the survey by some support organisations that ECSOs are weak in effectively describing what they do and what they are about to the general public. E-mail, CD-ROM, direct mail, telephone, and fax are the most popular means of distributing information (used by almost all respondent ECSOs). Eighty-eight percent rely on websites, which one CSO support organisation considers to be usually good.

Accountability

Regarding the influence of Aarhus Convention related rights towards public accountability in the former Yugoslav Republic of

Macedonia the survey has determined that the legal regulatory framework, especially the primary legislation, is relatively elaborated, but it is not implemented or used effectively. This is mostly due to the insufficient capacity and awareness and willingness of the responsible authorities and the ECSOs to put the respective rights into practice.

Although access to information has been facilitated through the Environmental Information System (established by the Ministry of Environment and Physical Planning) as well as through electronic tools, it needs improvement in the quality, speed of providing information and regular updating. Public participation requirements are not always supported by procedures and guidelines which would define obligations for the authorities and give them tools to bring these into practice.

Main findings: **Accountability**

- Governmental policy or cooperation procedures towards ECSOs are absent. ECSOs say they are involved in consultation processes randomly, without any harmonised approach (often the consultation requirements are driven by international projects or based on outside requests) and real, continuous and solid discussion between the decision makers and ECSOs does not take place.
- There are no rules or requirements regarding the selection and delegation of CSO representatives to different cooperative bodies with the government. Nevertheless, some new developments in this regard are being considered.
- Cooperation at the local level is better than at the central level. This is in part due to the decentralisation process, especially for some environmental duties where ECSOs could become a natural partner to municipalities (local waste issues are key as municipalities often have little capacity or knowledge). Closer cooperation is often limited due to the fact that CSOs have very little to offer the local community.
- Cooperation with local business takes place from time to time, and there is more willingness to establish a solid partnership among ECSOs.
- The legislative framework for access to information and public participation is generally good, while implementation, support through up-to-date guidelines and procedures remain the main problems. Neither authorities nor ECSOs know how to arrange an efficient decision-making process which could bring stakeholders to mutually agreed decisions.
- Public authorities expect ECSOs to take a more active role in commenting on draft documents, giving meaningful input to the different processes. According to ECSOs, however, these requests often fail to reach them and usually only carefully selected CSO representatives are invited to drafting groups. There is no clear procedure among CSOs on how these selected representatives collect inputs from the other members of the CSO community and report back to them.
- ECSOs do not have the capacities or the knowledge to engage fully in many of the decision-making processes (EIA, planning, etc). As such, Aarhus rights are exercised at a low level, where very few ECSOs have submitted official information requests and even fewer have been taking part in any kind of decision-making process.
- Good examples of cooperation, shared decision making and implementation of decisions exist at the local level.
- Previous initiatives on access to justice have stopped and await financial support for continuation.

Due to the insufficient cooperation between the authorities and CSOs the real impact of the citizens on decision making is very weak. One substantial obstacle for exercising Aarhus rights is the shortage of the active and knowledgeable application

of these rights by the CSOs and the general public. There is a lack of real expertise and understanding to which could be added the traditional opposition and poor cooperation from officials. The access to justice rights have not been exercised properly

mainly because of the conservative judiciary system which is currently under strong international pressure to reform, followed by low expertise and public awareness about the range of legal actions that can be initiated.

Cooperation between ECSOs and governmental officials exists to a certain extent but not in a structured manner and it is not supported by any government policy or cooperation model for interaction with ECSOs. However, some new developments within internationally funded projects will support the enhancement of that cooperation, as would the building upon of existing good practices from the local level, which have proved to be more successful. The communication practices of the CSOs with the local community has demonstrated in some cases a good level of partnership and resulted in implementation of joint actions (e.g. with the example of local environmental action plans). In addition there are some good examples of cooperation with business, especially local ones.

Level of working

(Data represent actual number and percentage of the total)

Comparison between 2001 and 2006 data

Because Montenegro is a new country, the REC did not collect separate data for it in 2001, when it was part of Yugoslavia. Therefore, the summary here reflects only the situation in 2006.

Fourteen environmental civil society organisations responded to the survey in Montenegro. They state that they have some 3,211 members, while the biggest organisation has 1,507 of them (half of all the membership in the movement). As such the average membership of the groups is 229 members per ECSO. As many as 50 people were cited as being employed either full- or part-time in the movement (around three-and-a-half per group and one of the highest averages in the SEE region); and some 634 volunteers work with the ECSOs and participate in their activities.

The total estimated budget of ECSOs in Montenegro is EUR 477,500, which gives a fairly impressive EUR 34,107 average budget per organisation. However, 14 percent of the organisations claim to have no budget for their activities. The largest category (43 percent) is those ECSOs with budgets between EUR 10,001 and EUR 50,000. In addition two ECSOs have budgets over EUR 100,000 per year. These figures suggest that out of the 14 organisations which submitted the questionnaires most are financially viable and have decent levels of support for their activities.

The most frequent sources of financial support are foreign governments/international public sector grants (78 percent), domestic government/public sector grants (71 percent) and foreign/international foundations/grants (64 percent). This trend remains the same also when we compare the data for the whole of Yugoslavia from 2001. Evidently foreign sources of funding tend to dominate the financial resources in the Montenegrin environmental movement.

The top priority topics for the organisations in Montenegro are environmental education and education for sustainable development, biodiversity and nature protection, and sus-

tainable development with a focus on environmental legislation and eco-tourism. In their work ECSOs most commonly carry out activities such as awareness-raising campaigns, fieldwork and advisory services.

Regarding their foundation, the vast majority reported that they formed after the year 2000. In addition the main locations of work are at the local and regional levels, with very few groups mentioning that they work internationally.

Legal and regulatory framework

The process for registering a CSO in Montenegro is simple and does not require significant resources. Montenegrin authorities have issued a helpful guide to assist in registration, and legal services are generally not required. Apparently the ease of registration and lax enforcement have resulted in abuses of the system, including the registration of for-profit businesses as ECSOs in order to evade taxes. Montenegrin ECSOs report various forms or statuses of association, for reasons that are not entirely clear.

Imprecise laws and an insufficient level of implementation contribute to uncertainty of ECSOs as to whether their operations are compliant with the law. The CSO sector gen-

erally has a poor reputation because of the large number of false CSOs, further limiting the ability of well-intentioned CSOs to operate within legal limits. Authorities are under public pressure to ignore legal technicalities because strict enforcement is seen as contrary to the democratisation of the country. Moreover, tax inspectors can examine records but cannot check whether an organisation's activities are consistent with its purpose. ECSOs are eligible for certain tax benefits and may also engage in commercial activities, although high overall tax rates result in many ECSOs not registering employees. Nevertheless, there is generally poor awareness of specific legal requirements, and it appears that ECSOs do not consider legal obligations to be critical to their operations.

Existing legal frameworks are generally good, even very good, although implementation and enforcement are poor. Authorities are accused by ECSOs of being selective in using their powers, granting access to certain favoured ECSOs to participate in governmental processes, while reportedly using administrative measures and intimidation against other ECSOs that are considered critical of the government. This may even extend to physical threats.

Environmental advocacy is virtually nonexistent. There is a high rate of involvement

Main findings: **Legal and regulatory framework**

- The process of registration is simple, straightforward and inexpensive, and CSO status offers significant tax advantages.
- There is a high rate of abuse of CSO registration possibilities by for-profit companies, which is not addressed by the authorities.
- ECSOs do not take their legal status and legal requirements seriously enough, mainly due to a lack of implementation and enforcement by authorities.
- Legal frameworks for information and participation are very good.
- Some ECSOs report that authorities engage in favouritism, intimidation and threats vis-à-vis ECSOs, depending on their activities and their level of support for the authorities.
- ECSOs tend to focus their involvement at the macro-level, such as law drafting, rather than the micro-level in individual cases.

Main findings: **Resource base**

- The most important donors are foreign (governmental and foundations), representing the principal financial resources for the environmental movement. However, ECSOs feel that donor priorities often do not match their needs.
- The administration of foreign grant projects is felt to be disproportionate to the amounts awarded. European Commission funds are particularly perceived by Montenegrin ECSOs to be difficult to access, being overly complex and with too stringent conditions.
- Central and local government funding is available, but is usually of lower magnitude and suffers from a lack of sufficient transparency in their administration.
- Non-acceptance of operational costs and staff salaries by many donors has put a brake on the organisational development of ECSOs.
- Access to donors and information on funding opportunities are more restricted outside the capital and particularly in rural areas.
- The Montenegrin environmental ECSOs surveyed exhibit fairly healthy budgets for the region and demonstrate a positive attitude towards their financial situation.
- Montenegrin ECSOs are fairly well equipped, but they have low staff capacities (especially in financial management).
- Self-financing strategies have not been fully explored by environmental groups.
- ECSOs believe that local philanthropy is not developing.

in law drafting, however, indicating that the legal framework is still in flux and ECSOs consider it their priority to help establish laws rather than making use of them in particular cases. As Montenegro has a small CSO population, training needs are very focused and specialised. Some organisations request legal training.

Resource base

The main sources of funding for ECSOs in Montenegro — by a clear margin — are foreign government/international public sector grants, domestic government grants and foreign/international foundations grants. No other type of funding comes close to these three types in terms of frequency. As such the funding base for ECSOs in Montenegro appears quite narrowly defined. In addition, other than membership fees, no other form of self-financing or public contracting is received in any substantial way. However,

there does appear to be some promise in fostering domestic business sponsorship.

On the relative importance of funding sources, foreign government/international public sector grants and foreign/international foundations grants are dominant. Even though domestic government funding (central and local) is received by many groups, the financial magnitude is smaller than the other two main sources. Quite clearly the funding to the country's ECSOs is financially dominated by external sources, and, though many ECSOs appear to have healthy budgets (two-thirds have yearly budgets over EUR 10,000), there is an inherent possibility that with a reduction in foreign funding the sector's resource base might not be diversified enough to cope with the change.

Human and organisational capacities

Generally the Montenegrin ECSOs are aware of strategic planning tools, but they are only

partially used by the NGOs. Most have a strategic plan and/or work plan, but none of those interviewed had a fundraising or business plan. Interestingly, the ECSOs consider it futile to have a fundraising strategy because of the limited number of donors in Montenegro and the fact that they are not making their strategies known to ECSOs.

The majority of Montenegrin ECSOs consider that they were fully or partially successful in their overall performance of the last few years. There are major obstacles to success expressed by the ECSOs, such as: the government not accepting ECSOs as partners, limited funding opportunities, not enough people working in the movement, young people migrating from poorer rural areas and a general lack of environmental expertise. There is only a small number of ECSOs whose mission fully follows the needs of the environment and stakeholders. Many of the environmental ECSOs in Montenegro are not organisationally very powerful and not independent. As such their mission delivery is dependent on donor programmes and in some cases they are government driven. The

reason for this dependency is purely material: ECSOs need to win projects disbursed by donors and government in order to survive.

ECSOs and other stakeholders have clearly contrasting views when talking about the strengths and weaknesses of the ECSOs. There is a clear miscommunication between these stakeholders and a lack of understanding as to the roles and the activities which ECSOs develop in society, including their capacity to implement projects, their effectiveness and their capabilities. It is clear that ECSOs need a stronger image and better visibility among the various stakeholders in society.

Montenegrin ECSOs employ on average a larger number of staff (three and a half per organisation) in comparison with most other SEE countries; also the ratio of paid/unpaid staff per organisation is the highest in the region: one in every 13 staff members is paid. This is a good sign for the long-term development of the ECSOs, as paid staff brings stability to an organisation and, in the appropriate context, development (although these figures might change if the NGO base

Main findings: **Human and organisational capacities**

- Concepts of strategic leadership, process management and its tools are generally well known and used by some ECSOs.
- Fundraising strategy is considered the most important tool for strategic leadership; however, no organisation surveyed demonstrated a developed strategy.
- Governance bodies tend to be weak with little influence in the work of the organisations.
- Communication and PR strategies are rarely developed, while many ECSOs perceive the need for better communication with the public and other stakeholders and for building a better image.
- Most of the organisations consider their performance as successful; the main obstacles they cite in their work are the government not accepting ECSOs as partners, limited funds, not enough people working in the movement, young people migrating from poorer areas and a lack of expertise.
- There is a clear miscommunication and lack of understanding among the ECSOs and other stakeholders as regards ECSOs' capabilities and their roles.
- Donors, government and support organisations' representatives feel that ECSOs lack vision, transparency, accountability, and are donor driven.

becomes broader). While people join the movement due to the wish to improve the environment and the society in general, many leave due to frustration related to the slow pace of change, lack of professional development and low salaries. The ECSOs have generally a good gender balance with slightly more men than women working in the movement.

Most of the organisations have gone through a training needs assessment but training is not used systematically for building capacity of the staff and is mostly done on an ad-hoc basis. The training programmes available in the country are not announced far enough in advance in advance to allow planning and they do not cover all the required subjects. Overall there is a need for a different approach to capacity building in the movement, where staff has the opportunity to experience implementation of knowledge through sharing of experience and best practices.

Information and knowledge base

Regarding ECSOs' operating environment (i.e. the external information landscape), 69 percent described the general availability of sustainable development and environment information as inadequate, just 23 percent as adequate. One ECSO observed they could not get enough environmental information from the state because the government does not recognise environment as a priority. Concerning quality, almost all CSO survey respondents felt improvement was necessary concerning the currency (100 percent), presentation (100 percent) and reliability (100 percent) of official information. Respondents observed that there is a lack of equipment to undertake environmental measurements, combined with the lack of a good statistical network.

Regarding proactive distribution, all surveyed ECSOs felt improvement was necessary (vis-à-vis ease of accessibility, media

Main findings: Information and knowledge base

- The general availability of official information is inadequate, and that which is available to ECSOs is found to be of problematic quality, out of date, poorly presented and/or unreliable.
- It was noted that the distribution of official sustainable development and environment information (both proactive and passive) does not occur in an organised manner, and therefore all surveyed ECSOs requested improvement, including in the handling of information requests.
- Almost all ECSOs welcomed improvements in exchanging information with authorities, both physical and virtual, as well as capacity building trainings of governmental institutions, since conflicts arise because they do not know how to work well with ECSOs.
- Well over half of ECSOs in Montenegro maintain collections of environmental books, brochures, CD-ROMs and reports. Eighty-three percent consider their organisation's knowledge capacities/skills on the environmental topics they work on as "adequate." Nevertheless all welcome additional training to enhance their internal knowledge.
- ECSOs tend not to undertake their own data research but largely depend on official information. Half are equipped with database equipment to manage their information, while less than one-third use desktop publishing equipment.
- Pamphlets and brochures are the most popularly published forms of information, alongside newspaper/periodical articles. E-mail, independent newspaper articles or advertisements; Internet websites; radio programmes or advertisements and telephone and fax are most popularly used by ECSOs to distribute information.

source distribution, and electronic and printed formats). Survey interviewees commented that the government does not provide environmental information in an organised manner, often because some information is considered sensitive. Official responses to information requests were also evaluated negatively, with one CSO noting: “The official environmental information system is not very well developed.” With regard to improving mechanisms to exchange information with authorities, 91 percent welcomed physical fora, 100 percent virtual fora.

Concerning the ECSOs own organisational environment, 64 percent maintain collections of brochures and CD-ROMs while 57 percent keep environmental books, and reports. Eighty-three percent described their organisation’s knowledge capacities/skills on the topics they work on as “adequate.” Nevertheless, all survey respondents welcomed additional training to enhance their internal knowledge. This would help remedy characteristics observed by an international organisation, which noted that ECSOs tend to be weak in putting forward constructive criticism.

When gathering or researching sustainable development and environment data, one support organisation noted that “ECSOs are 100 percent dependent on official environmental information, which affects the ability of ECSOs to further disseminate it.” Half of the ECSOs in Montenegro rely on database equipment to manage information while 29 percent rely on desktop publishing equipment. Brochures and pamphlets are the most popular published forms of information (by up to half of Montenegrin ECSOs) alongside newspaper/periodical articles. However, an international support organisation observed that ECSOs should learn to use language that helps citizens understand environmental information. E-mail, independent newspaper articles or advertisements; Websites; radio programmes or advertisements and tele-

phone and fax are used by all respondent ECSOs to distribute their information. However, media reporting appears to be the main source of information on ECSOs’ activities.

Accountability

The results of the survey on the current status of public accountability in Montenegro show that the general legislative framework is rather developed and is being brought in line with the provisions of the Aarhus Convention and EU directives regarding access to information, public participation in decision making and access to justice in environmental matters. Montenegro has not yet ratified/acceded to it, but rights similar to those reflected in the Aarhus Convention are being included in the series of new laws that have been adopted or are being developed and work is underway to establish, implement or improve the application of these rights. However, access to justice is lagging behind the most.

New laws are addressing the gaps in the system and it is expected that the situation will improve significantly. However, several of these laws will be in force only from 2008. Currently there are still some gaps and incompatibilities among the different recently and formerly adopted laws. The institutional background still needs to be developed or further improved, effective mechanisms need to be put in place, and practices need to be developed or improved to achieve the implementation of the mentioned rights. Financial and human resource limitations are or may be barriers to the effective implementation of the obligations.

Cooperation between the governmental bodies and the CSOs is insufficient and mostly limited to invitation of key CSO groups to discussions on draft laws and strategic documents.

Main findings: **Accountability**

- Recently a government strategy was developed for cooperation with ECSOs, but only limited mechanisms for cooperation or cooperative bodies exist between the ECSOs and the governmental authorities (e.g. Council for Sustainable Development). The most common form of consultation is inviting CSO representatives to working groups discussing drafts of laws, plans, programmes, or roundtable meetings, bringing together experts of different departments from ministries or agencies or sectoral ministries, academic experts and ECSOs. Although the relationship is generally good between the environmental and some other ministries and ECSOs, the influence of CSOs is limited in the formulation of governmental policy making. There are, however, some good examples such as when the government changes its position following strong CSO pressure (e.g. Tara River).
- NGO-government cooperation still depends to a large extent on personal contacts. Some ministries as well as some local authorities have designated a contact person for CSOs.
- There is usually a public call by the government for CSO participation in different working groups, and CSO organisations are nominated and elected by ECSOs. However, there are no rules or requirements regarding the selection and delegation of CSO representatives and selection is often based on personal relations.
- ECSOs are not experienced in working with the general public, involving them or mobilising them in the decision-making process. The bigger and more established groups have a better outreach than others and are advocating for more specific causes than before.
- There is usually good communication and cooperation between ECSOs and local stakeholders, but it occurs more often within voluntary initiatives, direct actions or smaller scale activities than in the form of more intensive joint activities or projects such as developing LEAPs or taking initiatives to improve the environment, reduce pollution and protect nature.
- Cooperation with national/local business is at the initial stage and rather limited.
- Although the legal framework is gradually developing and the basic rights for access to information and public participation are provided, practical implementation is still lagging behind. Enforcement and lack of clear rules and procedures remain the key problems.
- Despite slight improvements in the implementation of access to information requirements, many authorities still do not respond or fully provide the information either actively or upon request. There is also a lack of capacity to implement the obligations according to requirements. Access to draft laws and pollution information is the most problematic.
- The new law on access to information provides opportunities and is used by ECSOs who test the capacity of public institutions on how to comply with this law, but many environmental ECSOs do not yet use these opportunities.
- The new EIA law provides a good basis for public participation and the public participation requirements are included in most of the current laws, but it has not yet become general practice. However, public hearings are not always required or if they are required are not fully implemented. New laws were adopted on EIA, SEA and integrated pollution prevention and control (IPPC) but they won't be implemented until 2008.

Main findings: **Accountability** (continued)

- There is a new regulation at the local level on green space and this provides for access to information and public participation at the local level on issues regarding green space. Nevertheless, this has been implemented in only one municipality so far.
- Access to justice rights are provided on access to information and public participation, but obstacles make it difficult to enforce and use these rights for citizens and ECSOs (lack of knowledge about the rights of citizens, how those rights can be exercised, experience in how to file complaints and lack of free-of-charge legal assistance and advice to support the citizens).
- ECSOs have the right to file complaints against public authorities but they do not use the opportunities. Legal aid to citizens is not available or it is not focused on environmental rights and is among the barriers to exercising rights to access to justice.

Level of working

(Data represent actual number and percentage of the total)

Comparison between 2001 and 2006 data

When the REC compiled the data survey in 2001 it covered Yugoslavia, i.e. Serbia and Montenegro (Kosovo, which was and still is under UN administration, was surveyed separately). We cannot therefore fully compare data from 2001 with the survey in 2006. However, given the very small number of ECSOs in Montenegro and their higher number in Serbia, we attempt to refer to the 2001 Yugoslavian data where appropriate.

The survey covered 114 ECSOs, 110 of which are legally registered and four of which are informal groups. In 2001 the REC received 160 questionnaires (compared with 114 for Serbia and 14 for Montenegro in 2006). The ECSOs in Serbia count 35,434 members, 19,922 volunteers and 198 full- or part-time employees in 2006. There has been some increase in staff (the combined number of employees for Serbia and Montenegro was 248 in 2006, compared to 200 in 2001). Also the number of volunteers increased significantly from a mere 564 in 2001 for both states to 19,922 in 2006 in Serbia alone.

The estimated total budgets of ECSOs from Yugoslavia were EUR 616,250 in 2001. This figure has risen appreciably in the last five years to the present sum of EUR 1,648,000 for Serbia by itself. The estimated average annual budget per CSO is EUR 14,456 (comparing favourably to EUR 4,081 in 2001). However, 28 percent of the organisations have no budget or have a budget under EUR 500 per year, which roughly corresponds to 29 percent of Yugoslavian organisations with budgets under EUR 500 in 2001. Only four ECSOs report a budget over EUR 100,000 in Serbia (there are two such organisations in Montenegro). However, there was only one such organisation in 2001 in the entire sample of Yugoslavian organisations.

Domestic government/public sector grants and foreign foundation grants remain the most frequent sources of funding. However, compared to the 2001 Yugoslavia results we see the emergence of private/citizens donations and

grants as the third most common source of funding, replacing membership dues.

Among the top priority topic areas for Serbian environmental groups are environmental education/education for sustainable development, sustainable development, waste and water issues and sustainable tourism. The most frequent activities are awareness-raising campaigns, information dissemination and education. These topics and activities are more or less in line with the priority areas and activities identified in 2001. However, nature protection and biodiversity continues to be more in the focus of Montenegrin groups, while Serbian organisations in 2006 are now more concerned with waste and water issues.

When reviewing the periods when organisations were established, again the period from 2000 predominates (70 percent), with just under a quarter between 1996 and 2000, and less than one in ten before 1996. The levels of working have not really altered from 2001, with local and regional still the most popular. However, the national level appears to be a more important field for Serbian groups in 2006.

Legal and regulatory framework

Serbia does not have an effective legal framework for CSO operation. The law in force dates from 1981. A new law is under works. Due to the legal framework, many registered organisations do not call themselves associations, as is the case in most of the region. Despite the age of the law, the actual process of registration is reasonably efficient, although a substantial percentage of ECSOs considered the process overly bureaucratic.

Political instability is reflected in attitudes of respondents towards their own status. Many are concerned that the independence of Montenegro will have an effect on their legal validity, since virtually all ECSOs were registered under the laws of the Federal Republic of Yugoslavia or the Union of Serbia and Montenegro, while the registration laws of the Republic of Serbia were never used and are more cumbersome. Guidebooks are available on the registration process, but these may now be obsolete. Legal services can be useful in registration processes, but they are expensive and not readily available.

Main findings: Legal and regulatory framework

- Registration has been relatively simple up to now, but ECSOs are concerned about the effect of the dissolution of the Union of Serbia and Montenegro on their status.
- Some benefits are conferred to ECSOs in terms of taxes and other privileges, but newer organisations are treated differently from those established in Yugoslav times.
- Technical requirements discourage the use of some mechanisms related to CSO activities (e.g. the requirement that a corporation give a year's notice before donating money to a CSO discourages giving).
- A critical lack of capacity and resources, especially in the countryside, means that public authorities are not well trained and cannot implement the law.
- The legal framework for information is good.
- There are still gaps in the legal framework for participation.
- The administration of the law is considered by ECSOs to be rife with corruption of various forms, undermining the CSO community's confidence in and respect for authority.
- Access to justice is not a realistic expectation for ECSOs in Serbia.

ECSOs take their status seriously and a large number consider their activities to be not in accordance with their status. ECSOs are exempt from taxes on income up to RSD 300,000 (around EUR 4,000), but otherwise the perception is that they are generally treated the same by authorities as for-profit companies. Organisations dating from Yugoslav times, however, often have additional privileges (such as municipal office space) as compared to those established more recently. Donations may be tax deductible, but technical requirements discourage the use of this mechanism.

The country's economic crisis means that authorities, especially in the countryside, are poorly paid and poorly trained, and cannot carry out the responsibilities assigned to them by law. A general lack of stability of the legal framework, and poor implementation and information flow also contribute to the fact that ECSOs rarely make use of certain legal opportunities, such as the possibility to conduct commercial activities within limitations.

A new horizontal information law established a very good legal framework, but gaps remain in the law related to public participation. More significantly, it is evident that ECSOs have serious doubts about the quality of administration and the rule of law in Serbia. Many authorities do not know about the information law or do not know how to apply it. Anecdotal evidence points to continued corruption in authorities and intimidation. In many cases legal requirements are not followed, evidently because of pressure from special interests. It is not surprising that Serbian ECSOs do not feel they have any real opportunity for access to justice, nor do they pay attention to what rights they have. Even governmental officials admit that the judiciary is not independent. Therefore, it is surprising to see only a few ECSOs cite legal expertise as a staffing need.

Resource base

The three most frequent sources of funds for ECSOs in Serbia are: domestic government/public sector grants, foreign/interna-

Main findings: **Resource base**

- ECSOs are drawing from a fairly diverse group of financial resources, with no one source dominating the scene.
- Donor priorities have a determining effect on the issues covered by ECSOs. Donors appear to be concentrating on fewer and larger projects. Also donors' conditions are becoming more difficult for ECSOs to comply with (notably EC conditions).
- Domestic foundations appear to have less importance financially.
- The raising of funds through membership fees usually has limited financial impact.
- Funding from local authorities is developing, but at a slow rate. However, some local authorities are politically opposed to civil groups.
- Serbian environmental groups exhibit a fairly even range of budget sizes, though two-thirds say they have budgetary difficulties.
- Resources and capacities for developing ECSOs' funding plans and strategies are hard to obtain.
- Equipment resources of ECSOs in Serbia are markedly worse than the SEE regional averages.
- Adequate staff resources are more difficult to find in rural areas.
- There are only limited attempts from business to support ECSOs.

Main findings: **Human and organisational capacities**

- The concept of strategic leadership and its tools are generally well known but not all of them are well used, for example fundraising strategies.
- Many ECSOs perceive the need for better cooperation and communication with the government as urgent.
- ECSOs state that the media and government in general are exerting negative pressure on them. This has had a detrimental effect on the strength of the CSO movement.
- Serbia has the highest number of ECSOs in the SEE region which have not had a training needs assessment.
- Serbian ECSOs have one of the lowest averages of paid staff per organisation in the SEE region. However, they have the second highest membership averages.
- ECSOs are generally enthusiastic in implementing projects, but there is a danger regarding their ability to implement projects due to the lack of paid staff, an occasional lack of infrastructure, poor access to funds and weak support from the public.

tional foundations grants and private/citizens' donations. Other notable common sources are domestic business/corporate sponsorship, membership fees and domestic foundations donations/grants. Again, outside membership fees, self-financing or internal revenue generation sources play a minor role. The results demonstrate that the community is relying on a fairly diverse set of sources. Also, the frequency of foreign government support is notably lower than in SEE countries.

When it comes to the relative importance of these sources to the budgets of ECSOs, support from foreign/international foundations are the strongest, with foreign government grants equalling domestic government grants in importance (despite being less commonly accessed). As in other countries, membership dues are given little budgetary importance. Clearly raising funds through membership currently has limited promise. Also interesting is that though less common, domestic government contracting appears to be financially important to some groups. Perhaps these are funds being accessed that are larger than traditional grants available. Domestic foundations also appear to have less importance financially than might be hoped for.

This composition of resources in part explains the budget size pattern of ECSOs in Serbia. The budget data given by the surveyed groups appears to show a fairly broad band of financially mid-range-sized ECSOs, another grouping of ECSOs with limited resources and a few groups with larger budgets. In comparison to 2001, there has been some positive rise in budget sizes overall.

Human and organisational capacities

Generally ECSOs in Serbia are well aware of strategic leadership tools and their value for their better performance and are developing and using some of the plans to enable the organisations to attain their missions. Although most organisations had strategic and work plans, of those none interviewed had a developed fundraising plan. Structurally Serbian ECSOs are quite flexible; they have set governance structures, but generally no evolved internal structures due to the small number of people with which they operate.

Most Serbian ECSOs surveyed consider that they had a partially successful performance over the last year. The biggest factor cited as impeding them from achieving their goals was

the lack of trust in and weak cooperation with the government and media. Both government and media are considered to be exerting a lot of negative pressure on ECSOs and the little cooperation that exists is mostly a result of international initiatives or requirements. It is generally felt that the current government is not favourable to or interested in civil society.

The ECSOs in Serbia are considered to have very knowledgeable people, high ethics, good networks with all types of NGOs, international contacts, sizeable memberships, innovative approaches and enthusiasm in addressing problems. However, as in many of the SEE countries, the negative features expressed through the survey seem familiar: lack of steady funding, low visibility, inability to create enough public pressure, activities which do not represent community needs and an inability to carry out research.

Serbian ECSOs have an almost equal number of men and women involved in the sector. They count the highest average membership per organisation in the SEE region (56 percent — 20,000 — of the total number of members are members of one CSO: the Ecological Movement of the City of Novi Sad), but they exhibit one of the lowest averages of paid staff per organisation also. Serbian ECSOs train their staff on a regular basis, especially by utilising the services of a support organisation for training new staff. Some of them are training providers themselves for the NGO sector and they have accumulated significant experience in capacity building work for other ECSOs.

While many ECSOs consider that the training available for ECSOs is good, there is also a significant number that believe many of the training needs are not covered by the training programmes that are available. As regards training needs, both skills and knowledge related, ECSOs mentioned: training of trainers, communication, working with media, fundraising, organisational management, self-sustainability, wetland management, the Water Framework Direc-

tive, and legal frameworks. The preferred forms of learning are interactive trainings of two to four days with role plays, practice and consultations.

Information and knowledge base

Regarding ECSOs' operating environment, 56 percent described the general availability of sustainable development and environment information as inadequate, with 31 percent claiming it is adequate. However, some ECSOs noted an improvement in the availability of official information, although limited access to pollution information. Concerning quality, almost all CSO survey respondents felt improvement was necessary concerning the currency (95 percent), presentation (95 percent) and reliability (95 percent) of official information. One interviewed CSO noted that the city of Belgrade's Secretariat of Environment publishes good reports regularly about pollution and other environmental issues with up-to-date information, but that otherwise it is difficult to find current information (the latter an observation made by other CSOs as well).

Regarding the proactive distribution of official information, more than 90 percent of surveyed ECSOs felt improvement was necessary (vis-à-vis ease of accessibility, media source distribution, printed formats and distribution through public information centres). In truth, however, a wide variety of distribution mechanisms are in place and respondents noted that distribution of information has improved of late. The problem is more that a good deal of information (such as draft laws or new laws) cannot be easily obtained other than through personal contacts. Accessing information can therefore be problematic for smaller and less well connected organisations.

Official responses to information requests were also evaluated negatively, with one surveyed CSO noting that "officials do not respond to requests," and that officials "are even surprised when asked for information." They reasoned that the ministries, agencies and police are not

Main findings: **Information and knowledge base**

- The general availability of official information is inadequate, and that which is available to ECSOs is reported to be of problematic quality (out of date, poorly presented and/or unreliable).
- It was noted that despite the use of a variety of mechanisms in use to distribute official sustainable development and environment information (both proactive and passive), it still does not occur in a very systematic manner. Therefore all surveyed ECSOs requested improvement in this area, including the handling of information requests.
- Almost all ECSOs welcomed improvements in exchanging information with authorities, both physical and virtual.
- Well over half of the ECSOs in Serbia maintain collections of environmental books, brochures, CD-ROMs and reports. Eighty-two percent consider their organisation's knowledge capacities/skills on the environmental topics they work on as "adequate." Nevertheless all welcome additional training to enhance their internal knowledge.
- Half are equipped with database equipment to manage their information, while less than a quarter use desktop publishing equipment.
- Pamphlets and brochures are the most popularly published forms of information, alongside newspaper/periodical articles. E-mail, radio programmes or advertisements and posters/demonstrations are the most popular media used by ECSOs to distribute information. However, ECSOs need to learn more about how to deal with the public, and how to influence decision making and involve and unite the community to be more effective.

prepared to implement the existing laws (e.g. on access to information). With regard to improving mechanisms to exchange information with authorities, 88 percent welcomed physical fora, 89 percent virtual fora.

Concerning the ECSOs' own organisational environment, they are themselves useful centres of information with 63 percent maintaining collections of brochures, books, newspapers/periodical articles, press releases, and environmental reports. Eighty-two percent described their organisation's knowledge capacities/skills on the topics they work on as "excellent" or "adequate." Nevertheless, all survey respondents welcomed additional training to enhance their internal knowledge.

When gathering or researching sustainable development and environment data, respondents felt that Serbian CSOs need more skills in management and working with informa-

tion. Half of the ECSOs in the country survey rely on database equipment to manage information while 23 percent rely on desktop publishing equipment. Brochures and pamphlets are the most popularly published forms of information (by almost half of Serbian ECSOs) while a third publish via environmental CD-ROMs and newspaper/periodical articles. E-mail, radio programmes or advertisements and posters/demonstrations are used by all respondent ECSOs to distribute their information. However, ECSOs expressed a need to learn more about how to deal with the public, how to influence decision making and how to involve and unite citizens.

Accountability

The survey of the current status of public accountability in Serbia shows that the general legislative framework has been developed and similarly reflects the rights derived

Main findings: **Accountability**

- General government strategy or policy on cooperation with ECSOs is absent, with no extant cooperative bodies. Limited cooperation takes place only through pressure from ECSOs on the government. The existence and outcome of cooperation depends a lot on the good will of authorities. Few good examples of cooperation exist at the national level, but there are more in certain regions and at the local level.
- There are no rules or requirements regarding the selection and delegation of CSO representatives to different working groups or expert groups where ECSOs are invited by the government.
- ECSOs lack experience in working with the general public, and involving and mobilising them in the decision-making process. The bigger and more established groups have better outreach than others.
- Good communication and interaction between ECSOs and local stakeholders usually exists, but it occurs more often within voluntary initiatives, direct actions or smaller scale activities. Cooperation is rare in intensive joint activities and projects such as developing LEAPs or initiatives to improve the environment, reduce pollution or protect nature. The involvement of citizens in these is rather limited, as is their impact.
- Cooperation with national/local business is at the initial stage and rather limited.
- The legal framework is gradually being brought in line with the Aarhus Convention and EU requirements. The basic rights for access to information and public participation are provided, but practical implementation is lagging. Enforcement and a lack of clear rules and procedures remain the key problems.
- Despite slight improvements in the implementation of access to information requirements, many authorities still do not respond or fully provide the information upon request or actively. Access to draft laws, new laws or draft documents on strategic decisions and pollution information is the most problematic.
- There are improvements in exercising the rights to access to information and public participation, but there are still many ECSOs that do not know how to properly formulate an information request, how to ask for information correctly, or how to get involved.
- Though public participation is becoming a practice, public participation procedures are often not implemented properly (e.g. notification, accessibility of documents, avoidance of application of new procedures, and taking due account of comments).
- ECSOs have been more active in participating in strategic decision making on programmes, plans and legislation than in decision making on EIA or SEA, but see their influence on decisionmaking as limited. A lack of confidence in authorities and/or a lack of interest/motivation to get involved in decision making is yet another obstacle to exercising rights among the ECSOs and the public.
- ECSOs do not use access to justice opportunities because of the lack of an independent judiciary, lack of knowledge about their rights or how those rights can be exercised, lack of free-of-charge legal assistance and advice, lack of public advocacy to support citizens in filing complaints when their rights are infringed and lack of funding. A positive development is that a draft law has been proposed and discussed concerning regulating and providing free legal aid.

from the Aarhus Convention. A series of laws have been and are being developed and adopted which establish, implement or improve the application of these rights. These new laws are basically in line with the provisions of the Aarhus Convention and EU directives.

However, Serbia has not ratified or acceded to the Aarhus Convention. Plus the institutional background needs to be developed, effective mechanisms need to be put in place, and practices need to be developed or improved to achieve the implementation of the mentioned rights. While there are improvements in the access to information and public participation requirements, the situation regarding access to justice is lagging behind. There are also financial and human resource limitations which are or may be barriers to the effective implementation of the obligations.

Currently there are gaps and incompatibilities between old and recently adopted laws. There is also a deficit of clear rules, practical guidelines and administrative willingness to inform the general public and CSOs and to involve them in the decision-making process in a proper way. Cooperation between governmental bodies and CSOs is mostly insufficient and limited to the invitation of key CSO groups to discussions on draft laws and strategic documents.

(Data represent actual number and percentage of the total)

Comparison between 2001 and 2006 data

The 2006 survey gathered information from 30 environmental civil society organisations, a significant increase from the 12 that the REC mapped in early 2001. A good amount of other data suggests a general growth in the sector in practically all aspects.

The number of members increased from 539 to 2,878 in 2006, with comparably the average membership per organisation increasing from 45 to 96. Compared to only 10 paid employees in the 12 organisations in 2001, the Kosovar organisations report that they presently have 105 people employed full or part time (on average three and a half employees per CSO). The number of volunteers reported went up from 66 in 2001 to 2,601.

In 2001 the 12 ECSOs managed an estimated total budget of EUR 274,000. For 2006 the 30 groups responding had a total budget of EUR 382,500. As such the average estimated budget has actually decreased from EUR 22,833 to EUR 12,700 per organisation per year. If we look at the distribution of money more closely, we see that the number of organisations with a budget below EUR 500 went up alarmingly from 8 percent in 2001 to 42 percent. Two ECSOs had budgets over EUR 100,000 in 2001, while the number dropped to one in 2006. The financial data indicate that there is less funding available for Kosovar environmental groups now than five years ago.

While in both years (2001 and 2006) ECSOs were mostly receiving funds from foreign donors for their activities, membership dues, which were the second most frequent source of income (42 percent), decreased in importance in 2006. Domestic foundation grants remain the third most frequent source, but the number of ECSOs reporting that they had received such funds increased from 33 to 50 percent of respondents.

In the priority topic areas there are some important shifts (which is probably caused by the new organisations coming into the statistics for 2006). Environmental education

is ranked as the most important work area in both years. But besides nature protection, which present in both years, we see a marked shift to rural development, sustainable development, and environmental legislation, while air quality/air pollution was not among the top five in 2006.

Awareness-raising campaigns, education and conference/meetings were the most important activities for ECSOs in 2006, compared to cleaning actions/camps, training and awareness raising/education selected in 2001. In short, the most popular methods of work have remained very similar over the years.

The pattern of organisation formation is, as to be expected, dominated by groups established after 2000. However, the level of working has started to change. Previously, groups worked mostly at the local level, but now regional activities are more prevalent. Plus national and international levels are also increasing from the early days after the conflict.

Legal and regulatory framework

A high level of involvement of the international community in Kosovo has meant that the legal framework for registration of ECSOs is in theory clear and simple. Major improvements have been seen in the administration

of registration since the Provisional Government took over responsibility from the United Nations Mission in Kosovo (UNMIK). Nevertheless, due to a dire financial situation in the country, registration is considered to be financially burdensome by many. The law requires legal assistance for registration, although most think it is not necessary.

Kosovo's unique situation and challenges in developing governmental structures have contributed to an overall perception that from a legal standpoint it barely functions. A lack of experienced administrators and a complete revision of the law combine to create a situation where only the laws and institutions most critical to the survival of the population are actually relevant. Additionally, differences in backgrounds and standards mean that many laws are stuck in limbo between the self-government and the United Nations' Mission in Kosovo (UNMIK). The long and the short of it is that ECSOs operate in Kosovo with little attention to legal matters. For example, far fewer ECSOs in Kosovo comply with financial reporting obligations as compared to the region as a whole.

ECSOs in Serbian enclaves generally do not pay taxes, attributing this to difficulties in transport, communication and other conditions related to their interrelations with the central

Main findings: Legal and regulatory framework

- The legal framework for registration is good, and administrative practice has improved.
- Although operating under the same legal framework, in practice different standards for operations apply to ECSOs in Serbian enclaves than in the rest of Kosovo.
- Legal enforcement and implementation of taxation rules are lax, and ECSOs operate with little attention to legal matters.
- Legal frameworks for information, participation and other matters relevant to ECSOs are well developed according to international standards.
- Inadequate institutions, the lack of resources, and poor administration contribute to a general lack of implementation of legal frameworks except for the most critical matters affecting the population.

authorities. While enforcement is rare, it does reportedly take place. On the other hand, a large proportion of CSO funding comes through tax-exempt international grants. Corporations can deduct up to 5 percent of their income for donations, although due to a broad definition, most of this goes to support sports clubs, scholarships, and individuals.

The legal structure for access to justice in Kosovo is almost non-existent. However, Kosovo ECSOs have a slightly better opinion than their neighbours of legal frameworks, and of the implementation and enforcement of law. Although the international community has imposed international standards, there is not the same overall mistrust found, for example, in Bosnia and Herzegovina that results there in a low opinion of the law. International standards are appreciated and

understood, but generally considered to be unattainable. The legal framework for information and participation is no exception. It is of high quality but practically irrelevant. Several ECSOs consider legal expertise to be a major staffing need. Only a few training programmes in legal matters have been provided to environmental ECSOs.

Resource base

In Kosovo the funding resources for ECSOs are heavily dominated by foreign sources, both from governmental agencies and foundations. Any changes in priority or reduction in funding from these sources will therefore have a major impact on the community. Indeed this is already beginning to manifest itself with a large number of Kosovar environmental ECSOs having no activities, and

Main findings: **Resource base**

- Kosovar ECSOs have an understandable over-reliance on funding from foreign sources.
- Foreign funding is slowly declining, re-orientating priorities or tightening conditions.
- The shift in donor funding priorities has resulted in a subsequent shift in CSO activities.
- The government budget is currently too limited to support wide-scale giving, plus the government approach to civil society support is not a high enough priority.
- Too many environmental ECSOs use projects to subsidise their members' primary income (pseudo-consulting).
- The budgets of environmental ECSOs in Kosovo have worsened since 2001 (most ECSOs have no budget at all). As such there is a significant split between ECSOs with funds and those with none at all, signifying a funding crisis. A worrying three quarters of ECSOs report that they are in a financially uncertain or poor state.
- Kosovar ECSOs appear to have weaker fundraising strategies than in other SEE territories, resulting in ECSOs effectively "dying" between projects and making retention of staff (expertise) a major problem.
- Although ECSOs in Kosovo often own their own office space, many struggle from the costs entailed.
- Development of organised philanthropy from citizens and business is unlikely in the current social and economic climate.
- Membership fees are, in the short-to medium-term, an unlikely source of significant income for ECSOs.

many of those that do have projects are carrying out work outside their original scope or acting as pseudo-consultants. In addition an “insular mentality” has formed with Kosovar ECSOs not looking (or able to look) further than Kosovo targeted resources.

Domestic sources, in particular from the government, are under-represented, and changes need to be made to further institutionalise support to civil society. However, the government budget is quite limited and the status issue lends an air of financial uncertainty. As such other sources will need to be institutionalised (e.g. from environmental taxes) to offer some permanence and structure to funds, even if they are not of a great amount. The mechanism of delivering funds will need to be elaborated, particularly to ensure that support arrives fairly to all ethnic groups. Perhaps this can be best done by devolving decision making to local levels.

Financially, environmental ECSOs are in a worse state than in 2001. A substantial number have no financial resources at all. The situation shows that the environmental community does not have access to a diversified funding base and opportunities from self-generation of revenue or development of local philanthropy are at an early stage. Coupled to the weak fundraising background of many ECSOs, this situation has led to what could deepen into a prolonged financial cri-

sis for the environmental movement. New support, but the right forms of support, is sorely needed to improve the situation.

Human and organisational capacities

In general, ECSOs in Kosovo are well aware of strategic leadership tools, as well as administrative procedures and their importance for improved performance, but only a small number are actually using them. ECSOs in Kosovo are seen as very weak in terms of structures, programmes and expertise. They have very low visibility in society and are not effective partners with the government.

It is clear that environmental organisations have a very weak funding base, are donor driven and find it very difficult to cooperate and work outside of the territory due to a lack of experience and limited possibilities to compete for funds at the regional level. This situation is understandable for a country where the environmental organisations are very young and where the staff mostly consists of people with other jobs as well.

A majority of the organisations have gone through a training needs assessment, but training is not used systematically for building capacity of the staff; it is done mostly on an adhoc basis. The limited usage of strategic planning is possibly due to the lack of capacity and knowledge for its development. Help

Main findings: Human and organisational capacities

- ECSOs in Kosovo are underdeveloped and lack experienced staff.
- Strategic planning tools and administrative procedures are generally known among ECSOs but are not used for ensuring effectiveness or efficiency of organisations.
- ECSOs have intermediate levels of performance. However, they have a problem developing activities which would better respond to or reflect the needs of the citizens.
- ECSOs are often donor driven and do not have the support of the government.
- There is not enough institutional support available, especially for the minority Serbian ECSOs.

in developing a vision and strategy, together with administrative systems such as financial management, are mentioned as key training needs for building more sustainable organisations. It is understood from the interviews that a different approach to capacity building is also probably needed compared to those tried to date. This would need to focus on where the staff has the opportunity to implement the knowledge gained through hands-on coaching and international exchanges of staff at the CSO level.

Only a small number of organisations considered that they performed with complete success in the past year, while the majority rated their performance as partially or immediately successful. The reasons given for limited success are mostly related to: lack of motivation (as people are not paid), dependency on donors (constant adaptation of their programmes), external factors (lack of funds, low levels of awareness and lack of vision by the Provisional Government and communities on environmental issues) and the lack of institutional support from local authorities (especially for Serbian ECSOs).

While the ECSOs see themselves as having a strong base of expert staff, good ideas and responses to real needs, it is important to note that other stakeholders are not as positive in their assessment, believing Kosovar ECSOs lack vision, transparency, and accountability, and are donor driven.

Organisations employ three and a half staff on average and can rely on roughly 200 volunteers per organisation. The membership base of the organisations is generally good, especially considering the low interest of the population in environmental issues and awareness regarding ECSOs activities. While people join the movement out of a wish to effect a change in society and improve the environment and health prospective of the citizens, many leave due to the underdeveloped state of the sector. The ECSOs in Kosovo generally have a good gender balance, with slightly more men than women working in the movement.

Information and knowledge base

Regarding ECSOs' operating environment, 55 percent described the general availability of sustainable development and environment information as adequate, while 29 percent find it inadequate. Many respondents felt that information is scarce, and that which is available is of poor quality. This appears to be linked to the fact there is no environmental monitoring system. There is some official information from the environment ministry's education and awareness-raising unit and on the Internet, but many ECSOs cannot access this easily, while the information itself tends to be weak.

Concerning quality, practically all CSO survey respondents felt improvement was necessary with regard to the currency (95 percent), presentation (95 percent) and reliability (72 percent) of official information. One challenge described by a civil society support organisation comes from the private sector, where they feel that many companies and other interests are not keen for information to get out. Regarding proactive distribution, typically more than 80 percent felt improvement was necessary (vis-à-vis ease of accessibility, media source distribution, timeliness of delivery, electronic formats, and availability through public info centres). The environment ministry confirmed there are plans afoot to establish an environmental information bureau. However, some ECSOs would encourage the ministry to rely on ECSOs more as an information platform, as they feel that they react more quickly and easily and are directly connected to the issues. Official responses to information requests were also mostly evaluated negatively. With regard to improving mechanisms to exchange information with authorities, 89 percent welcomed physical fora, 94 percent virtual fora.

Concerning ECSOs' own organisational environment, approximately 45 percent maintain collections of environmental books, brochures and reports, while 39 percent maintain diverse collections of other materials (press releases, monitoring data and statistics). Eighty-six percent described their organ-

Main findings: **Information and knowledge base**

- The absence of any real environmental monitoring system impacts the availability of sustainable development and urban environment information for public consumption.
- Official information available to ECSOs is found to be of problematic quality (out of date, poorly presented, unreliable), hindered not least by conflicts of interest and unclear appreciation of end-user requirements.
- Distribution of official sustainable development and environment information (both proactive and passive) is poor and improvement is requested by ECSOs, including distribution through ECSOs.
- Almost all ECSOs welcomed improvements in the exchange of information with authorities, both physical and virtual.
- Around half of all ECSOs in Kosovo maintain collections of environmental books, brochures, and reports, and a lesser number of other materials. A large number consider their organisation's knowledge capacities/skills on the environmental topics they work on as "adequate." Nevertheless, all welcome additional training to enhance their internal knowledge.
- ECSOs tend to do little of their own research unless they have a specifically financed project. Around half are equipped with desktop publishing equipment to manage information, while a third have database tools.
- Pamphlets and brochures are the most popularly published forms of information. E-mail and posters/demonstrations are used by ECSOs to distribute information.

isation's knowledge capacities/skills on the environmental topics they work on as "adequate." Nevertheless, all survey respondents welcomed additional training to enhance their internal knowledge, particularly as funding is a constraint to further capacity building.

When gathering or researching sustainable development and environment data, Kosovar ECSOs tend to carry out very little of their own research unless they have a specifically financed project. Approximately half the ECSOs in Kosovo rely on desktop publishing equipment and 31 percent on database equipment to manage information. Brochures and pamphlets are the most popular forms of published information. E-mail, posters and demonstrations are most popular (by 100 percent of respondent ECSOs) for actually distributing their information. Other non-electronic or more traditional sources include independent news-

paper articles or advertisements, hardcopy reports or newsletters, and telephone and fax. Civil society support organisations said that ECSOs are well practiced in disseminating information and their use of the media is quite good.

Accountability

The review of the current status of public accountability in Kosovo concerning the legal and administrative set-up and practice of implementation of Aarhus rights shows that with the exception of a few cases, the Aarhus requirements have been generally incorporated in the present legislation. However, implementation and enforcement of these rights are lacking in many respects, partly due to the insufficient capacity and awareness of the responsible authorities and CSOs to put the respective rights into practice. The environment ministry has become more active in this field only

Main findings: **Accountability**

- The Law on Environment Protection and the Environment Impact Assessment Administrative Direction gives a framework to the authorities to work with CSOs. The provisions of these laws require the authorities to invite CSOs to sit on boards, steering committees, advisory and other types of cooperative bodies with the government, but the requirement is not granted by the rules of selection of CSOs to such bodies. Selection is usually based on personal contacts and the level of influence of the representatives of CSOs is difficult to evaluate.
- The Ministry for Environment and Spatial Planning has recognised the importance of the cooperation issues but has neither the financial means to support necessary activities nor the capacity and knowledge to do it. However, they are having closer cooperation with a CSO information network (Sharri.Net),
- Despite this policy, there is no solid base of cooperation towards ECSOs, and real interaction is rare and based on an ad hoc approach. Existing cooperation has focused on some expert CSO input to official plans and strategies.
- More positive examples of cooperation can be found on the local level (the focus appears to be on information and awareness building projects, as well as on clean-up actions).
- Although some community driven ECSOs who are interested in listening and representing the local people exist, many of the ECSOs are donor driven and do not adequately represent local opinions or needs.
- Limited cooperation has been taking place with the local business. There is no real practice of businesses providing funding or support for ECSO activities.
- The legislative framework for access to information and public participation is generally (with few exceptions) in place, but they are not supported by guidelines or more precise procedures.
- There is little knowledge or any guidelines on access to information or public participation procedures. ECSOs do not exercise their right to get information and be part of the decision making, plus authorities and ECSOs do not know how to reach out to their target groups or arrange an efficient decision-making process.
- Parliamentary commissions are open to the public; ECSOs can use these to comment on legislation and provide input.
- The outcome of the public consultations is not usually satisfactory for the public authorities, as ECSOs often do not give the expected level of input to the draft documents. In addition, ECSOs have a tendency to withdraw themselves from the consultation process while recognising that the process is going in an unsatisfactory direction. However, some good examples exist where authorities have been running the EIA consultations together with local NGOs or asking for help from CSOs with expertise in a certain area.

recently, and this is coupled to the ECSOs limited knowledge and experience in every aspect of the Aarhus rights.

How the authorities handle information requests is not tested by the ECSOs. Information available through the Internet or other means is poor in content and needs improvement in the quality, speed of provision and updating. Public participation requirements are not supported by procedures and guidelines that would define obligations for the authorities and give them tools to bring these into practice.

Access to justice rights have not been exercised properly, mainly because of the low expertise and public awareness for the range of legal actions that can be initiated.

Cooperation between ECSOs and governmental officials exists to a certain extent, but not yet on a satisfactory level for either party. Unlike in other SEE countries, cooperation is also required by the Law on Environment Protection but is not supported by more specific regulations or sets of rules. Representatives of ECSOs can be selected to take part in many advisory and other consultative boards and committees, but their level of influence is not sufficient.

ECSOs' interaction with local citizens usually takes place in the context of certain environmental occasions (such as Earth Day), public campaigns and other initiatives related to specific projects. ECSOs have not developed mechanisms for understanding public opinion; they are largely donor driven and not community driven. Limited cooperation has been taking place with local business, but it is not common for businesses to provide funding or support CSO activities.

Annex: Questionnaire Part B

Annex: Questionnaire Part B

REGISTRATION ISSUES

1. If you are legally registered, how would you evaluate the procedural complexity of the registration process? (tick the applicable option in each column)

Bureaucracy	Financial	Legal
<input type="checkbox"/> clear and simple	<input type="checkbox"/> requires significant financial resources	<input type="checkbox"/> requires the services of a lawyer
<input type="checkbox"/> unclear, complicated, overly bureaucratic	<input type="checkbox"/> does not require significant financial resources	<input type="checkbox"/> does not require the services of a lawyer

2. If you are legally registered, which of the following best characterises the way in which your organisation's registration corresponds to its intended activities? (tick only one option)

- ☐ We have the full legal capacity to engage in our intended activities
- ☐ Our registration is a formality and is not relevant to our activities
- ☐ We intend to amend our registration to conform to our activities or to change our activities
- ☐ We sometimes have difficulties with the authorities concerning certain activities due to our registration status

REPORTING ISSUES

3. Which of the following documents does your organisation produce on a regular basis? Please select the reports you prepare and indicate why you produce them. (tick all that apply)

Type of report	Why you produce it?
<input type="checkbox"/> activity report (annual report)	<input type="checkbox"/> required by law <input type="checkbox"/> required by internal rules of the organisation <input type="checkbox"/> required under contract (by donors, etc.) <input type="checkbox"/> facilitates fundraising <input type="checkbox"/> information for members <input type="checkbox"/> public information and outreach
<input type="checkbox"/> financial report (accounts)	<input type="checkbox"/> required by law <input type="checkbox"/> required by internal rules of the organisation <input type="checkbox"/> required under contract (by donors, etc.) <input type="checkbox"/> facilitates fundraising <input type="checkbox"/> information for members <input type="checkbox"/> public information and outreach

4. If you are legally registered, which of these tax exemptions apply to your organisation? (tick all that apply in the left column)

Tick the box if your organisation is exempt from the form of taxation listed.	How do you evaluate the procedure for obtaining the reimbursement of the taxes you are exempted from? (tick all that apply)
<input type="checkbox"/> income taxes for grants, donations	<input type="checkbox"/> It is fairly easy to use and reasonably fast. <input type="checkbox"/> The procedure is somewhat burdensome but works. <input type="checkbox"/> The tax rules are applied inconsistently. <input type="checkbox"/> The procedure is too complicated and we do not invest our time in it.
<input type="checkbox"/> income taxes on generated fees	<input type="checkbox"/> It is fairly easy to use and reasonably fast. <input type="checkbox"/> The procedure is somewhat burdensome but works. <input type="checkbox"/> The tax rules are applied inconsistently <input type="checkbox"/> The procedure is too complicated and we do not invest our time in it.
<input type="checkbox"/> employment taxes	<input type="checkbox"/> It is fairly easy to use and reasonably fast. <input type="checkbox"/> The procedure is somewhat burdensome but works. <input type="checkbox"/> The tax rules are applied inconsistently. <input type="checkbox"/> The procedure is too complicated and we do not invest our time in it.
<input type="checkbox"/> VAT	<input type="checkbox"/> It is fairly easy to use and reasonably fast <input type="checkbox"/> The procedure is somewhat burdensome but works. <input type="checkbox"/> The tax rules are applied inconsistently. <input type="checkbox"/> The procedure is too complicated and we do not invest our time in it.
<input type="checkbox"/> other (please specify)	<input type="checkbox"/> It is fairly easy to use and reasonably fast. <input type="checkbox"/> The procedure is somewhat burdensome but works. <input type="checkbox"/> The tax rules are applied inconsistently. <input type="checkbox"/> The procedure is too complicated and we do not invest our time in it.

5. Are donations to your organisation from individuals and corporations tax deductible? (tick only one option)

- ☐ yes
- ☐ no
- ☐ don't know

FUNDING

6. How would you evaluate the financial status/viability of your organisation? (tick only one option)

- ☐ very good (we do not have any serious financial problems)
- ☐ good enough (we have enough funding to support our main activities, but some of our current and/or prospective programmes lack financing)
- ☐ unstable (most of our projects are experiencing financial difficulties)
- ☐ poor (we can hardly maintain our basic activities/projects because of insufficient funding)
- ☐ very poor (we do not receive any funding)

7. Approximate the relative importance (proportion of your current budget) of the main funding sources for your organisation (try to make approximately 100 percent from the different types):

Type of funding	critical source (>50%)	very important source (25-50%)	some-what important (5-25%)	minor source (<5%)	not a source/ don't know
F1 – domestic government/public sector grants or donations	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F2 – domestic government/public sector contracts	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F3 – foreign government/international public sector grants or donations	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F4 – foreign government/international public sector contracts	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F5 – domestic foundation donations/grants	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F6 – foreign/international foundations donations/grants	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F7 – domestic business/corporate sponsorship, donations or grants	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F8 – foreign/international business/corporate sponsorship, donations or grants	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F9 – other private/citizens donations or grants	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F10 – membership dues (fees)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F11 – fees and charges for mission-related services (economic activity), i.e. research, consulting, education, training	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F12 – fees from rentals or other assets (investments, copyrights)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
F13 – subsidiary businesses and/or product sales	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

MATERIAL

8. **How would you characterise the status of your organisation's equipment resources?** (tick only one option)

- ☐ excellent (we have all the equipment we need)
- ☐ adequate (we more or less have what we need to do our activities)
- ☐ inadequate (we don't have the required equipment, and it hinders our activities)
- ☐ none (we have no equipment, and it damages our prospects)

9. **Which of the following options best describes your organisation's accommodation?** (tick only one option)

- ☐ Our organisation owns its own office space.
- ☐ We rent (or receive for free) the office space we need for our work.
- ☐ Sometimes we rent rooms or another space for our work.
- ☐ We work informally or in the working places of our members.
- ☐ We do not need any room for our work.

STAFF

10. **If you have paid staff or external specialists (part-time or full-time), please indicate how many your organisation employs or contracts under the following functions?** (write numbers in the boxes below)

Type of position	Number
Managers
Project staff
Administrative/clerical staff
External project staff/consultants
External accountants/bookkeepers
Legal advisors/lawyers

11. Considering all the people “actively” involved in your organisation (staff, members and volunteers), please estimate the percentage that are women.

(tick only one option)

- ☐ more than 80 percent
- ☐ between 60 and 80 percent
- ☐ between 40 and 60 percent
- ☐ between 20 and 40 percent
- ☐ less than 20 percent

12. How would you evaluate the overall performance of your organisation in achieving its goals over the last year, regardless of the reasons?

(tick only one option)

- ☐ unsuccessful performance
(we mostly failed to achieve the goals that we had identified)
- ☐ partially unsuccessful performance
(some of the goals were partly achieved, but most were not)
- ☐ intermediate performance
(several goals were achieved, while several others were not)
- ☐ partially successful performance
(many of our goals were achieved, but some were not)
- ☐ fully successful performance
(we have achieved all the goals that were identified for last year)
- ☐ difficult to say
(don't know; we did not really evaluate our goals)

13. Within your organisation, please evaluate the importance of the following strategic and planning tools. (please tick the appropriate box in each row)

	Very important, this tool is key to our organisational planning and is closely adhered to	Important, this tool is regularly used as a planning mechanism and mostly followed	Somewhat important, we use this tool, but it is only partially applied	Less important, we only occasionally or informally use such a tool for our planning, but it is seldom followed	Not important, we do not use such a planning tool
Strategic planning of our activities	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Fundraising strategy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Human resources strategy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Communication and/or PR strategy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Business planning	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Others, please specify	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

14. **Within your organisation, please evaluate the importance of the following administrative procedures.** (please tick the appropriate box in each row)

	Very important, this procedure is key to our organisational management and is fully adhered to	Important, this procedure is fairly well developed for management and mostly followed	Moderately important, this is somewhat developed, but it is partially followed	Less important, this is informally developed, and is seldom followed	Not important, we do not have or use a procedure
Financial management	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Human resource management	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Operations manual	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Project management system	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

15. Which of the following options best describe your organisation's approach to training? (tick all that apply)

- ☐ Our organisation invests funds into staff training on a regular basis.
- ☐ Our staff attends only trainings that are free of charge.
- ☐ Our organisation follows a staff development strategy when it comes to training.
- ☐ Our staff attends trainings that are relevant to the organisation's development needs.
- ☐ Our organisation encourages its staff to attend as many trainings as possible.
- ☐ Our organisation lets the staff attend any training they consider appropriate.
- ☐ Our organisation doesn't think training is important.
- ☐ Don't know.

16. Evaluate if the training offered for civil society meets the training needs of your organisation. (tick only one)

- ☐ very good (we have all that we need)
- ☐ good enough (basically we have enough possibilities to answer our needs, but in some areas we see gaps)
- ☐ insufficient (many of the needs are not addressed)
- ☐ poor (some training is available but it is insufficient)
- ☐ very poor (we do not receive any training)

17. Has your organisation undergone any training-needs analysis in the past three years?

- ☐ yes
- ☐ no
- ☐ don't know

18. Please indicate those areas in which your organisation had the opportunity to participate in training courses. (please tick the appropriate box in each row)

Management topics	Very useful	Somewhat useful	Not useful
Organisational strategy			
Strategic planning of activities	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Fundraising strategy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Human resources strategy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Communication and/or PR strategy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Business planning	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Organisational processes			
Financial management	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Human resource management	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Operational and administrative processes	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Project management system	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Other relevant skills			
Database design and maintenance	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Desktop publishing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
GIS application	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Hardware/software installation and management	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Management of volunteers	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Presentation skills	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Proposal writing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Team building	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Webpage management	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

19. If your organisation had the opportunity to participate in training courses on the following topics, please indicate their usefulness.

(please tick the appropriate box in each row)

Environmental topics	Very useful	Somewhat useful	Not useful
T1 – agriculture/organic or traditional farming	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T2 – air quality/air pollution	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T3 – animal protection/wildlife	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T4 – biodiversity	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T5 – certification and labelling	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T6 – climate change	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T7 – consumer protection/consumer rights	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T8 – economic instruments			
T9 – energy, nuclear	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T10 – energy, renewable/energy efficiency	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T11 – environmental education/education for sustainable development	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T12 – environmental legislation			
T13 – environmental policy making	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T14 – forestry	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T15 – genetically modified organisms/biotechnology	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T16 – globalisation/international policy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T17 – nature protection	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T18 – rural development	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T19 – sustainable development	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T20 – sustainable/green consumption	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T21 – tourism, sustainable/eco- tourism	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T22 – toxics/chemicals/persistent organic pollutants (POPs)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T23 – transport/traffic	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T24 – urban environment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T25 – waste issues	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
T26 – water issues	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

20. If your organisation had the opportunity to participate in the following skills development training courses, please indicate their usefulness. (please tick the appropriate box in each row)

	Very useful	Somewhat useful	Not useful
A1 – advisory services	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A2 – awareness raising campaigns	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A3 – campaigning/protesting/ direct action	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A4 – clean-ups/camps	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A5 – community organising and planning (Local Agenda 21, LEAP)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A6 – conferences/meetings	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A7 – education	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A8 – environmental impact assessment (e.g. SEA, EIA)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A9 – environmental management	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A10 – fieldwork	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A11 – information dissemination	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A12 – legal advocacy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A13 – lobbying	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A14 – media/press	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A15 – monitoring/measuring (technical)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A 16 – negotiation facilitation/ dialogue facilitation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A17 – networking	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A18 – policy implementation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A19 – public meetings	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A20 – public participation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A21 – publishing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A22 – research	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A23 – social marketing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A24 – training/capacity building	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A25 – watchdog (scrutinising public/private activity)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

21. Please assess the general availability of information on environment/sustainability in your country. (tick one)

- ☐ excellent (information is freely available on many potential topics and issues)
- ☐ adequate (there is enough information but it requires significant effort to gather it)
- ☐ inadequate (difficult to access and often incomplete information)
- ☐ none (no or very minimal information available)
- ☐ don't know

22. Regarding the quality of content and distribution of official (governmental) environmental information, please evaluate the following factors. (please tick the appropriate box in each row)

	Large improve- ments needed	Some improve- ments needed	No improve- ments needed	Don't know
Content				
Currency (i.e. is it up to date?)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Presentation (clarity)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Reliability	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Distribution				
Ease of accessibility	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Reasonability of price	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Timeliness of delivery	<input type="checkbox"/>			
Through media	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Electronic forms	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Printed formats	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Public info centres	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Exchange				
Physical (face-to-face) fora for dialogue	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Virtual (electronic) fora for dialogue	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

23. Please assess your organisation's knowledge capacities/skills on the environmental topics you work on. (tick only one option)

- ☐ excellent (we have all the information we need)
- ☐ adequate (we more or less have what we need to do activities)
- ☐ inadequate (we don't have the required knowledge, and it hinders our activities)
- ☐ none (we have minimal knowledge, and it is damaging our prospects)

24. What are the formats in which your organisation collects and/or distributes environmental information? (please tick the appropriate box in each row)

	Collected	Distributed
Brochures	<input type="checkbox"/>	<input type="checkbox"/>
Environmental books	<input type="checkbox"/>	<input type="checkbox"/>
Environmental CD-ROMs	<input type="checkbox"/>	<input type="checkbox"/>
Educational and documentary films	<input type="checkbox"/>	<input type="checkbox"/>
Monitoring data and statistics	<input type="checkbox"/>	
Newspaper/periodical articles	<input type="checkbox"/>	<input type="checkbox"/>
Pamphlets	<input type="checkbox"/>	<input type="checkbox"/>
Press releases	<input type="checkbox"/>	<input type="checkbox"/>
Environmental reports	<input type="checkbox"/>	<input type="checkbox"/>
Verbal opinion and commentary regarding environmental decision-making processes	<input type="checkbox"/>	<input type="checkbox"/>

25. Evaluate how regularly your organisation utilises each of these means/mechanisms to distribute environmental information or data. (please tick the appropriate box in each row)

Data/information distribution	Often used	Occasionally used	Never used
CD-ROMs	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Direct mail	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
E-mail	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Independent newspaper articles or advertisements	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Internet website	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Library/info centre	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Own hardcopy report or newsletter	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Posters/demonstrations	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Radio programmes or advertisements	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Telephone/fax	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

26. Does your organisation use any data management/processing system? (tick all those that apply)

- ☐ databases
- ☐ GIS
- ☐ desktop publishing
- ☐ other, please specify:

.....

.....

- ☐ we do not

NETWORKS

27. **Evaluate your general experience within civil society networks.** (tick only one)

- ☐ very good (we have good experiences, and it is crucial to our work)
- ☐ good (overall we have positive experiences and we use them often)
- ☐ adequate (usually positive experiences, but it doesn't always meet our requirements or needs)
- ☐ poor (we found the networks to be rarely useful or relevant to us)
- ☐ very poor (we did not find them useful for our work)

28. **Which of these functions of a CSO network would “especially” encourage your organisation to use or participate in it?** (tick all that apply)

- ☐ news and information sharing
- ☐ experience exchange
- ☐ awareness of funding opportunities
- ☐ awareness of training opportunities
- ☐ partner identification for joint projects
- ☐ partner identification for lobbying activities
- ☐ increase campaigning effectiveness
- ☐ greater visibility and exposure
- ☐ other, please specify

29. **How would you evaluate your relationships with governmental authorities?**
(please tick the appropriate box in each row)

Level/type of cooperation	We cooperate closely and constructively	There is occasional cooperation	There is no cooperation yet (we plan to develop it)	We confront each other	Difficult to say/don't know
Parliamentary bodies	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
National authorities, agencies (and bodies) responsible for environmental issues	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Other national governmental bodies and agencies	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Local governments	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Other local level official bodies and agencies or their branches	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Foreign governments (embassies, agencies)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Intergovernmental organisations (e.g. the UN)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

30. How would you evaluate your relationships with business, media and academia? (please tick the appropriate box in each row)

Level/type of cooperation	We cooperate closely and constructively	There is occasional cooperation	There is no cooperation yet (we plan to develop it)	We confront each other	Difficult to say/don't know
National/local businesses	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
International corporations operating in your country	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Local media	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
National media	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Academia	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

31. How would you evaluate your relationships with citizens, community organisations and other CSOs? (please tick the appropriate box in each row)

Level/type of cooperation	We cooperate closely and constructively	There is occasional cooperation	There is no cooperation yet (we plan to develop it)	We confront each other	Difficult to say/don't know
Citizens and general public	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Local CSOs and community groups in your country	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
National CSOs	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
CSO from neighbouring countries	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
International CSOs	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

32. How do you inform the citizens in your community about the initiatives you are taking or the activities you are involved in? (tick all that apply)

- ☐ media (TV, radio, newspapers)
- ☐ Internet, e-mail, websites
- ☐ publications (e.g. leaflets, brochures, newsletters)
- ☐ direct mailing (e.g. postcards, letters, flyers)
- ☐ public meetings
- ☐ street actions, demonstrations, posters
- ☐ billboards
- ☐ other, please describe:

.....

.....

- ☐ we do not target citizens with our initiatives

33. If you involve citizens of your community in your activities, what process or tools do you use? (tick all that apply)

- ☐ informing citizens in advance about upcoming events, places, dates, programmes
- ☐ organising public meetings or discussion(s) with key stakeholders of the community to discuss needs and proposals
- ☐ organising public meeting(s) or discussion(s) with municipal representatives and key stakeholders of the community to discuss needs and proposals
- ☐ collecting comments and feedback from citizens
- ☐ establishing joint working group(s) with stakeholder involvement to develop proposals for activities
- ☐ establishing expert groups with citizen involvement to discuss specific issues
- ☐ focus groups
- ☐ organising workshops
- ☐ opinion polls, questionnaires or surveys
- ☐ research, studies
- ☐ other, please describe:

.....

.....

- ☐ we do not involve citizens in our initiatives

34. What is your experience with access to environmental information and public participation in decision making and access to justice in environmental matters? (please tick the appropriate box in each row)

Has your organisation in the last three years:	YES	NO	If yes, how often (instances)
submitted an official request for environmental information to the responsible authority?	<input type="checkbox"/>	<input type="checkbox"/>
participated in public participation on:			
<i>a specific activity, such as EIA, licensing, permitting?</i>	<input type="checkbox"/>	<input type="checkbox"/>
<i>a strategic document such as a national/regional/local plan, programme strategy, policy and its SEA?</i>	<input type="checkbox"/>	<input type="checkbox"/>
<i>drafting a law or regulation?</i>	<input type="checkbox"/>	<input type="checkbox"/>
been a plaintiff in an environmental case (either as part of the administrative procedure or court procedure)	<input type="checkbox"/>	<input type="checkbox"/>

Only answer the following questions on information access (Q.35), public participation (Q.36) and access to justice (Q.37) if you answered yes to the appropriate parts in question 34.

35. Based on your experiences, how do you evaluate the current situation for accessing environmental information upon request from government authorities in your country? (please tick the appropriate box in each row)

Positive	Negative
<input type="checkbox"/> Legislation regarding rights and responsibilities is in place.	<input type="checkbox"/> Legislation regarding rights and responsibilities is absent.
<input type="checkbox"/> There are clear procedures or rules.	<input type="checkbox"/> Procedures and/or rules are unclear.
<input type="checkbox"/> Legislation is enforced properly.	<input type="checkbox"/> There is a lack of implementation and enforcement of legislation.
<input type="checkbox"/> There is enough knowledge about what rights citizens and CSOs do have.	<input type="checkbox"/> Knowledge about what rights citizens and CSOs do have is weak.
<input type="checkbox"/> There is good knowledge and skills about how to use rights, procedures and opportunities.	<input type="checkbox"/> Knowledge and skills about how to use rights, procedures and opportunities is missing.
<input type="checkbox"/> The timeframe is appropriate to receive the information.	<input type="checkbox"/> The timeframe is too long to receive the information.
<input type="checkbox"/> Information is kept confidential only in well justified cases.	<input type="checkbox"/> Confidentiality is claimed too frequently, creating barriers to access to information.
<input type="checkbox"/> There are no costs for receiving the information, or they are appropriate and reasonable.	<input type="checkbox"/> Cost of receiving information is unjustifiably high and creates barriers to access to information.
<input type="checkbox"/> It is clear which authorities hold what information, where and how it can be accessed.	<input type="checkbox"/> Information on which authorities hold what information and where and how it can be accessed is unclear.
<input type="checkbox"/> The information provided is usually up to date.	<input type="checkbox"/> The information is often outdated.
<input type="checkbox"/> The information is in the right format and easy to understand and use.	<input type="checkbox"/> The information is in an improper/complicated format and difficult to understand and use.
<input type="checkbox"/> Authorities generate and collect a good variety of information.	<input type="checkbox"/> Information is often not available.

36. Based on your experiences, how do you evaluate the current situation on public participation in environmental decision making in your country?
(please tick the appropriate box in each row)

Positive	Negative
<input type="checkbox"/> Legislation regarding rights and responsibilities is in place.	<input type="checkbox"/> There is a lack of legislation regarding rights and responsibilities.
<input type="checkbox"/> Procedures or rules are clear.	<input type="checkbox"/> There is a lack of clear procedures or rules.
<input type="checkbox"/> Implementation and enforcement of legislation is good.	<input type="checkbox"/> There is a lack of implementation and enforcement of legislation.
<input type="checkbox"/> Knowledge about what rights citizens and CSOs have is adequate.	<input type="checkbox"/> There is a lack of knowledge about what rights citizens and CSOs have.
<input type="checkbox"/> Knowledge and skills about how to use rights, procedures and opportunities is good.	<input type="checkbox"/> Knowledge and skills about how to use rights, procedures and opportunities is missing.
<input type="checkbox"/> Notification about upcoming decision-making and public participation opportunities is made in time.	<input type="checkbox"/> Notification about upcoming decision-making and public participation opportunities is made late.
<input type="checkbox"/> Proper information about upcoming decision-making and public participation opportunities is distributed.	<input type="checkbox"/> There is no information about upcoming decision-making and public participation opportunities.
<input type="checkbox"/> The timeframe to prepare for public consultations is adequate.	<input type="checkbox"/> The timeframe to prepare for public consultations is too short.
<input type="checkbox"/> We have sufficient resources for participation.	<input type="checkbox"/> The lack of resources hinders our activities in this area.
<input type="checkbox"/> We have adequate technical expertise to comment properly on technical/environmental aspects.	<input type="checkbox"/> We are missing technical expertise to comment properly on technical/environmental aspects.
<input type="checkbox"/> Public hearings are properly organised.	<input type="checkbox"/> No public hearings are organised or they are not properly organised.
<input type="checkbox"/> Public comments are normally taken into account.	<input type="checkbox"/> Public comments are not taken into account.
<input type="checkbox"/> Information is given about which comments were taken into account and which were not.	<input type="checkbox"/> No information is provided about which comments were taken into account and which have not.
<input type="checkbox"/> Detailed information is given about the outcome of the decision making.	<input type="checkbox"/> No detailed information about the outcome of the decision making is available.

37. **Based on your experiences, how do you evaluate the current situation of access to justice in environmental matters in your country?**
(please tick the appropriate boxes in each row)

Positive	Negative

<input type="checkbox"/> Resources are available to finance fees for experts and lawyers/attorneys.	<input type="checkbox"/> There is a lack of resources to finance fees for experts and lawyers/attorneys.

THE REGIONAL ENVIRONMENTAL CENTER FOR CENTRAL AND EASTERN EUROPE (REC) is a non-partisan, non-advocacy, not-for-profit international organisation with a mission to assist in solving environmental problems in Central and Eastern Europe (CEE). The center fulfils this mission by promoting cooperation among non-governmental organisations, governments, businesses and other environmental stakeholders, and by supporting the free exchange of information and public participation in environmental decision making.

The REC was established in 1990 by the United States, the European Commission and Hungary. Today, the REC is legally based on a charter signed by the governments of 28 countries and the European Commission, and on an international agreement with the government of Hungary. The REC has its head office in Szentendre, Hungary, and country offices and field offices in 17 beneficiary countries, which are: Albania, Bosnia and Herzegovina, Bulgaria, Croatia, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, the former Yugoslav Republic of Macedonia, Montenegro, Poland, Romania, Serbia, Slovakia, Slovenia and Turkey.

Recent donors are the European Commission and the governments of Austria, Belgium, Bosnia and Herzegovina, Bulgaria, the Czech Republic, Croatia, Denmark, Estonia, Finland, Germany, Hungary, Italy, Japan, Latvia, Lithuania, the Netherlands, Norway, Poland, Slovakia, Slovenia, Sweden, Switzerland, the United Kingdom, and the United States, as well as other inter-governmental and private institutions.
